Abstract: The present study was conducted in nine different locations (forested areas and unclassified natural areas) of six administrative districts of Tripura State from March 2012 to May 2019 as part of the biodiversity exploration of the state for further addition of odonate fauna. In this communication, we report six species of Anisoptera and seven species of Zygoptera as new records from Tripura State. Among these 13 newly recorded species, one Anisoptera and two Zygoptera species are Data Deficient and the rest are Least Concern according to IUCN Red List.

Keywords: Damselfly, dragonfly, Insecta, amphibiotic, habitat preference, Indo-Burma biodiversity hotspot, range extension, data deficient, regional species pool, IUCN Red List.

Abbreviations: TU—Tripura University | ODO—Odonata | AESH—Aeshnidae | GOMP—Gomphidae | LIBE—Libellulidae | EUPH—Euphaeidae | PLAT—Platynemididae | COEN—Coenagrionidae | IMG XXXX (4 digits)—raw image number of photograph.

Bengali: বর্তমান অধ্যয়নটি ত্রিপুরা রাজ্যের ছয়টি জেলার নয়টি ভিন্ন স্থানে (বনাঞ্চল এলাকায় এবং অশ্রেণীবদ্ধ প্রাকৃতিক এলাকায়) করা হয়েছে মার্চ ২০১২ থেকে মে ২০১৯ পর্যন্ত, রাজ্যের জীববৈচিত্র্য অন্বেষণের অংশ হিসাবে আরও নতুন প্রজাতির ফড়িং রাজ্যের 'ফড়িং তালিকায়' যোগ করার জন্য। এই কমিউনিকেশনে, আমরা ত্রিপুরা রাজ্যের 'ফড়িং তালিকায়' Anisoptera-র ছয়টি প্রজাতি এবং Zygoptera-র সাতটি প্রজাতি নিবন্ধন করি। IUCN রেড লিস্ট অনুযায়ী, এই ১৩টি নতুন নিবন্ধীকৃত প্রজাতির মধ্যে, একটি Anisoptera এবং দুটি Zygoptera প্রজাতি Data Deficient এবং বাকিগুলি Least Concern.

Author details: MR. DHIMAN DATTA did master's degree in Zoology from Tripura University, Suryamaninagar, West Tripura and presently working as a visiting Lecturer of Women's College, Department of Zoology, Agartala, Tripura. His research interests are diversity and ecology study of odonates, ants, moths, and butterflies. DR. BASANT KUMAR AGARWALA is a retired professor of Tripura University, Department of Zoology, and ex-chairman of Tripura State Pollution Control Board. He works on taxonomy, diversity and ecology of aphids, ladybird beetles, butterflies, odonates, and many more insects. DR. JOYDEB MAJUMDER pursued his master's degree and PhD in Zoology from Tripura University and currently works as a program manager of Biodiversity Conservation in the Project for Sustainable Catchment Forest Management Project (SCATFORM), Tripura. His research interests are diversity and ecological study of aphids, ladybird beetles, snakes, butterflies, moths, and odonates.

Author contributions: DD and JM have collected the data and prepared the manuscript; BKA reviewed the manuscript and also allowed using laboratory facilities.

Acknowledgements: The authors are greatly thankful to Arajush Payra and Aaratik Pal for their support and help in the identification of Odonata species and in the preparation of the first draft of the manuscript; and Dr. Partha Pratim Bhattacharjee, Dipankar Kishore Sinha, and Rahul Lodh for their generous assistance during field visits.

INTRODUCTION

The insect order Odonata comprises of dragonflies (Anisoptera) and damselflies (Zygoptera). Members of this order are widely distributed, insectivorous, and amphibiotic. Egg and larval stages are aquatic and the adult stage is terrestrial. Odonata insects prefer hilly streams, and forested riparian habitats and most of the endemic and rare species are restricted to these habitats (Andrew et al. 2008, 2009; Subramanian 2009, 2012; Mitra et al. 2010; Subramanian et al. 2011; Koparde et al. 2015). Habitats like ponds, lakes, coastal marshes, natural & man-made water bodies, water logged areas, grass lands, and paddy fields support species richness and diversity (Subramanian 2009, 2012; Mitra et al. 2010; Subramanian et al. 2011; Majumder et al. 2014; Tiple & Khoparde 2015). The eastern India is one of the globally rich areas of odonates, and the forest streams and rivers of this region are natural habitats for many endemic and habitat-specialist species. In the eastern Himalaya, high endemism occurs in Khasi hills and Darjeeling-Sikkim Himalaya (Subramanian & Babu 2017). Tripura province, a small hilly State of northeastern India in Indo-Burma biodiversity hotspot zone (Myers et al. 2000), supports diverse odonate fauna (Clausnitzer et al. 2009) due to habitat diversity and micro habitat richness.

Of the 6,392 odonate species recorded across the world (Paulson et al. 2022), 488 are known from India (Subramanian & Babu 2017). India's odonate fauna include 186 species/ subspecies as endemic (Subramanian & Babu 2017). Lahiri (1977, 1987) made notable contributions to odonates of Meghalaya and Manipur (parts of north eastern India). Mitra (2002) did the most comprehensive work on odonates of north eastern India, including a review of all the literature available till then. Joshi & Kunte (2014) reported 69 species including one addition (*Calicnemia erythromelas* Selys, 1891) to the Indian Odonata fauna from Nagaland. Joshi et al. (2017) reported *Pseudothemis zonata* (Burmeister, 1839) and *Burmagomphus divaricatus* (Lieftinck, 1964) for the first time from Nagaland and Manipur, respectively. In Tripura, Srivastava & Sinha (2000) reported 35 species and Majumder et al. (2014) reported 53 species. In this paper, we report our findings on Odonates from Tripura State.

METHODS

Study area

The present study was conducted at nine different locations (forested and unclassified habitats, Table: 1) of Tripura, from March 2012–May 2019 as a part of biodiversity exploration study. Geographically, Tripura lies between 22.9333°N–24.5333°N & 91.1666°E–92.35°E, and in the meeting point of two biodiversity hotspots (Eastern-Himalaya hotspot in the east and Indo-Myanmar hotspot region in the west) (Myers et al. 2000). This small north-eastern hilly state (Tripura) has a tropical savanna climate and receives an annual rainfall ranges from 1800–2400 mm approximately; south-west monsoon spread over seven months almost (April–October) and average minimum temperatures are around 20–25 °C, maximum temperatures are around 30–35 °C with elevation range varying from 15 m (lowest) to 930 m (highest).

Field sampling and Identification

In this opportunistic study, field observations and photography of odonates were conducted mainly on clear sunny days between 08:00 h and 12:00 h during monsoon season to record maximum species of odonates (Majumder et al. 2014). Species were recorded though random walks along potential habitats like streams, bamboo forest, small forest patch, manufactured water bodies, and deep forest habitats and followed direct search technique (Sutherland 1996) and sighting is opportunistic. Comet optical binoculars 8 x 40 NV JL 77888 were used during field observations and photographs were taken by Canon EOS 50D, Canon Power Shot SX 530 HS, Canon Power Shot SX 200 IS, and SONY DSC-HX 200V camera models and YU 5010A mobile device. At first sight, photographs were taken and individuals were identified with the help of reference books (mentioned below in identification part). If only photography was not enough for identification, then specimens were captured and these were released back to their respective habitats, after visual observation and photographic identification in field was successful. In cases where field identification was not enough, then effort was made to collect at least one individual with insect net for accurate identification in the Ecology & Biodiversity Laboratory of Tripura University under permission from the authority of Tripura Biodiversity Board, Government of Tripura [letter no. F. 22/3(6)/for JBIC/I&P/B-D/07/2336 and 4972-76 dated 07.01.2009 and 29.06.2009], respectively. Morphological characters for identification of unidentified species were studied

Image 1. Google Earth image of India showing the Tripura state and different study sites of six administrative districts.

Table 1. Geoco-ordinates of the study sites.

District	Study sites	Latitude (N)	Longitude (E)	Elevation (meter)	Habitat types
Dhalai	Saikabari (SB); Study site-1	24.12 ^o	91.90 ^o	123	Perennial stream surrounded by moist-deciduous secondary forest
Gomati	Chabimura(CM); Study site-2	23.54 ^o	91.60 ^o	47	Riparian woody forest
	Dhajanagar (DN); Study site-3	23.54 ^o	91.46 ^o	107	Man-made freshwater pond
Khowai	Baramura Hill (BH); Study site-4	23.81 ^o	91.57 ^o	44	Secondary mixed-moist deciduous forest nearby small stream
	Sonatala (ST); Study site-5	24.04 ^o	91.61 ^o	33	Slow flowing drain water surrounded by herbs and shrubs
North Tripura	Jampui Hill (JH); Study site-6	23.99 ^o	92.28 ^o	176	Slow flowing stream surrounded by semi-evergreen forest
South Tripura	Trishna Wildlife Sanctuary (TWS); Study site-7	23.25 ^o	91.37 ^o	45	Natural freshwater lakes with submerged vegetation
West Tripura	Amtali (AT); Study site-8	23.77 ^o	91.26 ^o	27	Secondary scrub jungles
	Ishan Chandra Nagar (ICN); Study site-9	23.75 ^o	91.25 ^o	25	Man-made freshwater pond surrounded by scrub jungles

in laboratory using Zeiss Stemi 508 stereo zoom 8:1 microscope. Photographs of the observed habitat types explored in this study, helped in recording the habitat preference of different odonates.

Identification of recorded specimens was done with the help of identification keys provided by Fraser (1933, 1934, 1936); Mitra (2002); Subramanian (2009, 2014); Nair (2011), and with online databases, <www.

indianodonata.org> (Joshi et al. 2019). The taxonomic list follows widely accepted systematics of Odonata by Dijkstra et al. (2013) and Subramanian & Babu (2017). Recordings of location parameters such as latitude, longitude, and elevation were done with the help of Garmin eTrex Vista GPS device. Conservation status of the recorded odonates of this study was according to the International Union for Conservation of Nature (IUCN) Red List of Threatened Species (IUCN 2020).

RESULTS

Thirteen species of Odonata are reported as new records and added to the Odonata fauna of Tripura from this study. Of these, six dragonfly species belong to six different genera under three families, namely Aeshnidae, Gomphidae, Libellulidae, and seven damselfly species belonging to seven different genera under three families, namely Coenagrionidae, Euphaeidae, and Platycnemididae (bold marked species of Appendix 1). A detailed account of findings is given below:

Suborder: Anisoptera Selys, 1854

Family: Aeshnidae Rambur, 1842

1. *Periaeschna magdalena* (Martin 1909) (Image 3.1)

Material examined: 2 males (TU/ODO/AESH/IMG0358), 30.iii.2012, Chabimura, Photo: J. Majumder; 1 male (TU/ODO/AESH/IMG0002), 22.xi.2012, Jampui Hill, Photo: J. Majumder.

Habitat: Slow flowing streams surrounded by woody riparian forest.

IUCN Red List status: Least Concern (Dow 2009)

Distribution: Bhutan, China, India and Viet Nam.

Comments: Genus *Periaeschna* and species *P. magdalena* are reported for the first time from Tripura. Fraser (1936) reported this species from Garo Hills, Meghalaya which is approximately 255 km and 265 km (in aerial distance) far from Chabimura (study site-2) and Jampui hills (study site-6), respectively.

Family: Gomphidae Rambur, 1842

2. *Macrogomphus montanus* Selys, 1869 (Image 3.2)

Material examined: 1 female (ODO/GOMP/IMG 6290), 30.v.2019, Sonatala, Photo: D. Datta.

Habitat: Dry shrub jungle near to human habitation.

IUCN Red List Status: Data Deficient (Subramanian 2010)

Distribution: Bangladesh, India, and Nepal.

Comments: Genus *Macrogomphus* and species *M. montanus* are reported for the first time from Tripura.

Earlier, Fraser (1936) reported this species from Assam and Khan (2018) reported it from different locations including Khagrachari (approximately 110 km far from Sonatala, Study site- 5) from the Chittagong Division, southeastern Bangladesh.

Family: Libellulidae Rambur, 1842

3. *Tetrathemis platyptera* Selys, 1878 (Image 3.3)

Material examined: 1 male (TU/ODO/LIBE/IMG0001), 09.vi.2013, Dhajanagar, Photo: J. Majumder.

Habitat: Man-made freshwater pond surrounded by secondary vegetation.

IUCN Red List Status: Least Concern (Dow 2020)

Distribution: China, India, Indonesia, Lao People's Democratic Republic, Peninsular Malaysia, Myanmar, Thailand and Viet Nam.

Comments: Genus *Tetrathemis* and species *T. platyptera* are reported for the first time from Tripura. Earlier, Laltanpuui (2017) reported this species from different locations including Reiek (approximately 110 Km far from Dhajanagar, Study site-3) of Mamit District, Mizoram.

4. *Tramea limbata* Desjardins, 1832 (Image 3.4)

Material examined: 1 male (TU/ODO/LIBE/DSC02352), 01.xi.2013, Trishna WLS, Photo: J. Majumder.

Habitat: Natural freshwater lake with submerged vegetation.

IUCN Red List Status: Least Concern (Clausnitzer 2016)

Distribution: Botswana, Cameroon, Cape Verde, The Democratic Republic of the Congo, Cote d'Ivoire, Gabon, India, Liberia, Mali, Mauritius main island, Mayotte, Nepal, Nigeria, Oman, South Africa, Sri Lanka, Yemen and Namibia.

Comments: Genus *Tramea* and species *T. limbata* are reported for the first time from Tripura. Earlier, Laltanpuui (2017) reported this species from different locations including Lengpui (approximately 130 Km far from Trishna WLS, Study site- 7) of Aizawl District, Mizoram.

5. *Trithemis festiva* Rambur, 1842 (Image 3.5)

Material examined: 2 male (TU/ODO/LIBE/IMG0712), 12.vii.2016 Baramura Hill, Photo: D. Datta

Habitat: Slow flowing streamlets surrounded by secondary mixed moist deciduous forest

IUCN Red List Status: Least Concern (Dow 2009)

Distribution: Afghanistan, Cambodia, China, Cyprus, Greece, Hong Kong, India, Indonesia, Iran, Iraq, Lao People's Democratic Republic, Malaysia, Myanmar, Nepal, Pakistan, Papua New Guinea, Philippines, Russian Federation, Singapore, Sri Lanka, Taiwan, Province of

China, Thailand, Turkey, and Viet Nam.

Comments: Species *T. festiva* is reported for the first time from Tripura. Earlier, Rajesh Sanap recorded this species from Hatikuli Tea Estate, Golaghat District, Assam (posted in Odonata of India), approximately 600 Km far from Baramura Hills, Study site- 4.

6. *Zyxomma petiolatum* Rambur, 1842 (Image 3.6)

Material examined: 1 female (TU/ODO/LIBE/IMG2208); 03.viii.2017, Sonatala, Photo: D. Datta; 1 male (TU/ODO/LIBE/IMG0571), 24.iv.2018, Sonatala, Photo: D. Datta

Habitat: Shady areas with big trees and scrub jungles.

IUCN Red List Status: Least Concern (Subramanian & Dow 2017)

Distribution: Australia, Bangladesh, Brunei Darussalam, China, Hong Kong, India, Indonesia, Japan, Lao People's Democratic Republic, Malaysia, Myanmar, Nepal, New Caledonia, Palau, Papua New Guinea, Philippines, Seychelles, Singapore, Sri Lanka, Taiwan, Province of China, Thailand, Vanuatu, and Viet Nam.

Comments: Genus *Zyxomma* and species *Z. petiolatum* are reported for the first time from Tripura. Earlier, Takhelmayum & Gupta (2014) reported this species from Keibul Lamjao National Park (KLNP), Manipur, approximately 230 km far from Sonatala (Study site-5).

Suborder: Zygoptera Selys, 1854

Family: Coenagrionidae Kirby, 1890

7. *Aciagrion occidentale* Laidlaw, 1919 (Image 4.1)

Material examined: 1 female (TU/ODO/COEN/DSC00945), 13.viii.2013, Saikabari, Photo: J. Majumder; 1 female (TU/ODO/COEN/IMG0003), 11.viii.2013, Amtali, Photo: J. Majumder.

Habitat: Slow flowing small perennial streams surrounded by secondary bushy forest

IUCN Red List Status: Least Concern (Mittra 2010)

Distribution: Bangladesh, Cambodia, India, Sri Lanka, Thailand and Viet Nam.

Comments: *A. occidentale* is reported for the first time from Tripura. Earlier, Bora & Meitei (2014) reported this species from the ICAR Research Complex for NEH Region, Umiam, Meghalaya, which is approximately 170 Km and 220 Km far from Saikabari (study site-1) and Amtali (study site-8), respectively.

8. *Argiocnemis rubescens* Selys, 1877 (Image 4.2)

Material examined: 1 male (TU/ODO/COEN/IMG0158), 29.iii.2012, Chabimura, Photo: J. Majumder.

Habitat: Stagnant marshy water body with submerged

vegetation and surrounded by scrub jungles.

IUCN Red List Status: Least Concern (Mittra 2017)

Distribution: Australia, Bangladesh, Brunei Darussalam, India, Indonesia, Lao People's Democratic Republic, Malaysia, Myanmar, Papua New Guinea, Philippines, Singapore, Thailand and Vietnam.

Comments: *A. rubescens* reported first time from Tripura. Earlier, Boruah et al. (2016) reported this species from Kaziranga National Park (KNP), Assam, approximately 360 km far from Chabimura (study site-2).

9. *Mortonagrion aborens* Laidlaw, 1914 (Image 4.3)

Material examined: 2 females (TU/ODO/COEN/DSC04897), 15.iii.2013, IC Nagar, Photo: J. Majumder.

Habitat: Freshwater pond surrounded by shrubs and bamboo brakes.

IUCN Red List Status: Least Concern (Subramanian 2010)

Distribution: Bangladesh, India, Indonesia, Malaysia, and Thailand.

Comments: Genus *Mortonagrion* and species *M. aborens* are reported for the first time from Tripura. Earlier, Boruah & Saikia (2015) reported this species from Barpeta, Assam, approximately 285 Km far from IC Nagar (study site-9).

Family: Euphaeidae Jacobson & Bianchi, 1905

10. *Dysphaea walli* Fraser, 1927 (Image 4.4)

Material examined: 2 males (TU/ODO/EUPH/IMG8754), 17.vi.2013, Chabimura, Photo: J. Majumder.

Habitat: Alongside riverbank, surrounded by mature riparian mixed-moist deciduous forest.

IUCN Red List Status: Data Deficient (Dow 2019)

Distribution: Bangladesh, India and Myanmar.

Comments: Genus *Dysphaea* and species *D. walli* are reported for the first time from Tripura. An earlier observation (Anonymous 2020a) (www.indianodonata.org) by Somen Sarkar reported the species from Jeypore-Dehing Rain Forest, Dibrugarh District, Assam, approximately 570 km far from Chabimura (study site-2).

Family: Platycnemididae Tillyard, 1917

11. *Elatoneura campioni* Fraser, 1922 (Image 4.5)

Material examined: 2 females (TU/ODO/PLAT/DSC00750), 13.viii.2013, Saikabari, Photo: J. Majumder.

Habitat: Free flowing stream surrounded by mature secondary squashy semi-evergreen forest.

IUCN Red List Status: Data Deficient (Sharma & Dow 2010)

Distribution: India and Myanmar

Comments: Genus *Elatoneura* and species *E.*

campioni are reported for the first time from Tripura. Earlier, Boruah et al. (2016) reported this species from Kaziranga National Park (KNP), approximately 290 km far from Saikabari (study site-1).

12. *Prodasineura verticalis* Fraser, 1921 (Image 4.6)

Material examined: 2 males (TU/ODO/PLAT/DSC00579), 10.viii.2013, Saikabari, Photo: J. Majumder.

Habitat: Free flowing stream surrounded by secondary mixed-moist deciduous forest.

IUCN Red List Status: Least Concern (Dow 2010)

Distribution: Bangladesh, Brunei Darussalam, China, India, Indonesia, Lao People's Democratic Republic,

Malaysia, Myanmar, and Thailand.

Comments: Genus *Periaeschna* and species *P. magdalena* are reported for the first time from Tripura. Earlier, Subramanian (2015) reported this species from northeastern India. An observation (Anonymous 2020b) published in Odonata of India (www.indianodonat.org) website by Rejoice Gassah from Dosdewa Forest Trail, Karimganj District, Assam, approximately 50 km far from Saikabari (study site-1).

13. *Pseudocopera ciliata* Selys, 1863 (Image 4.7 and 4.8)

Material examined: 2 males, (TU/ODO/PLAT/IMG0196), 29.iii.2018, Sonatala, Photo: D. Datta; 1

Image 2. Habitat photographs of study sites: 1—Perennial stream surrounded by moist-deciduous secondary forest (Saikabari, study site-1) | 2—Riparian woody forest (Chabimura, study site-2) | 3—Man-made freshwater pond surrounded by herbs and shrubs (Dhajanagar, study site-3) | 4—Slow flowing streamlet surrounded by secondary mixed moist deciduous forest (Baramura Hill, study site-4) | 5—Slow flowing drain surrounded by herbs and shrubs (Sonatala, study site-5) | 6—Slow flowing stream surrounded by semi-evergreen forest (Jampui Hill, study site-6) | 7—Natural freshwater lake with submerged vegetation (Trishna WS, study site-7) | 8—Secondary scrub jungles (Amtali, study site-8) | 9—Part of a pond surrounded by scrub jungles (IC Nagar, study site-9). © 2, 4, 5, 7—Dhiman Datta | © 1, 3, 6, 8, 9—Joydeb Majumder.

female (TU/ODO/PLAT/IMG6928), 26.v.2016, Sonatala, Photo: D.Datta

Habitat: Slow flowing drain water area near to pond or paddy field.

IUCN Red List Status: Least Concern (Dow 2018)

Distribution: Bangladesh, Cambodia, China, Hong Kong, India, Indonesia, Peninsular Malaysia, Myanmar, Taiwan, Province of China, Thailand and Vietnam.

Comments: Genus *Pseudocoptera* and species *P. ciliata* are reported for the first time from Tripura. Earlier, Josh & Kunte (2014) reported this species from Intanki, Peren District, Nagaland which is approximately 255 km far from Sonatala (study site-5). All distances mentioned here are aerial distance between two selective areas.

DISCUSSIONS AND CONCLUSIONS

Before this study, quality field data on distribution and habitat preference of odonates was scanty from most of the eastern Himalayan range, particularly from the southern and eastern parts including the state Tripura of India. Present study is a substantial advancement of the odonate diversity of Tripura over the earlier studies (Srivastava & Sinha 2000; Majumder et al. 2014). After this study with addition of 13 species, the updated odonate fauna of Tripura state is represented by 75 species under 49 genera (28 Anisoptera genera and 21 Zygoptera genera) and nine families (4 Anisoptera and 5 Zygoptera); (Appendix 1). Three odonata species namely, *M. montanus*, *D. walli* and *E. campioni* showed Data Deficient as per IUCN Red List categories of threatened species. Among the 13 species reported here, 12 species are endemic to India except *D. walli* as per Subramanian & Babu (2017). *P. magdalena*, *Macrogomphus montanus*, *Tetrathemis platyptera*, *Tramea limbata*, *Trithemis festiva*, *Z. petiolatum*, *Aciagrion occidentale*, *Argiocnemis rubescens*, *Mortonagrion aborensis*, *Elatoneura campioni*, *Prodasineura verticalis*, *Pseudocoptera ciliata* are endemic to India recorded from this study. Members of *T. festiva* are found commonly near streams and those of *Zyxomma petiolatum* are common in shady areas surrounded by big trees and shrubs. Members of *Aciagrion occidentale*, *Argiocnemis rubescens*, *Mortonagrion aborensis*, *P. ciliata* are very common in their respective study sites. However, *P. magdalena*, *M. montanus*, *T. platyptera*, *T. limbata*, *Dysphaea walli*, *E. campioni*, *P. verticalis* are found to be comparatively rare in their study sites. The documenting of the regional species pool from this part of India has benefited the inclusion of previously unrecorded odonate species,

which will help future researchers in the understanding of species biology, distributional ranges, and prospective habitats.

June 2023 | Vol. 15 | No. 6 | Pages: 23283–23462

Date of Publication: 26 June 2023 (Online & Print)

DOI: 10.11609/jott.2023.15.6.23283-23462

Communications

Presence of medium and large sized terrestrial mammals highlights the conservation potential of Patharia Hill Reserve in Bangladesh

– M. Aminur Rahman, Ai Suzuki, M. Sunam Uddin, M. Motalib, M. Rezaul Karim Chowdhury, Ameer Hamza & M. Abdul Aziz, Pp. 23283–23296

Diversity and abundance of aquatic birds in Koonthankulam village pond, Tamil Nadu, India

– Selvam Muralikrishnan, Esakkimuthu Shanmugam, Natarajan Arun Nagendran & Duraisamy Pandiaraja, Pp. 23297–23306

Plastral deossification zones in the Endangered Spiny Hill Turtle *Heosemys spinosa* (Testudines: Geoemydidae) on Borneo

– Siti Nor Baizurah & Indraneil Das, Pp. 23307–23314

Addition of four new records of pit vipers (Squamata: Crotalinae) to Manipur, India

– Premjit Singh Elangbam, Lal Biakzuala, Parag Shinde, Ht. Decemson, Mathipi Vabeiryureilai & Hmar Tlawmte Lalremsanga, Pp. 23315–23326

Addition to the Odonata fauna of Tripura, India

– Dhiman Datta, B.K. Agarwala & Joydeb Majumder, Pp. 23327–23337

Occurrence and distribution of two new libellulids (Odonata: Insecta) of the Kashmir Valley, India: *Orthetrum sabina* (Drury, 1770) and *Palpopleura sexmaculata* (Fabricius, 1787)

– Tahir Gazanfar & Mehreen Khaleel, Pp. 23338–23343

Rayed Thistle Fly *Tephritis cometa* Loew (Diptera: Tephritidae) a new record to India

– Rayees Ahmad, Tariq Ahmad & Barkat Hussain, Pp. 23344–23349

New state records of some Dermaptera De Geer, 1773 (Insecta) species in India

– Tanusri Das, Kochumackel George Emiliyamma & Subhankar Kumar Sarkar, Pp. 23350–23358

Moth diversity of Guindy, Chennai, India and DNA barcoding of selected erebid moths

– Sreeramulu Bhuvargavan, Mani Meenakumari, Ramanathan Nivetha & Sundaram Janarthanan, Pp. 23359–23372

New record of the sphingid moth *Acherontia styx* Westwood, its parasitoid *Trichogramma achaeae* in Jasmine Jasminum sambac L., and its bioecology

– I. Merlin K. Davidson, Pp. 23373–23381

Identification and phylogenetic analysis of various termite species distributed across southern Haryana, India

– Bhanupriya, Shubhankar Mukherjee, Nidhi Kakkar & Sanjeev K. Gupta, Pp. 23382–23396

Survey of Black Band Disease-affected scleractinian corals via drone-based observations in Okinawa, Japan

– Rocktim Ramen Das, Parviz Tavakoli-Kolour, Sanaz Hazraty-Kari & James Davis Reimer, Pp. 23397–23402

Trace elements in Penaeus shrimp from two anthropized estuarine systems in Brazil

– Ana Paula Madeira Di Benedetto, Inácio Abreu Pestana & Cássia de Carvalho, Pp. 23403–23407

Aquatic Hemiptera inhabiting rice fields in Karaikal, Puducherry, India

– M. Kandibane & L. Gopianand, Pp. 23408–23415

Leaf defoliation and *Tabernaemontana rotensis* (Asterids: Gentianales: Apocynaceae) flower induction and fruit development

– Thomas E. Marler, Pp. 23416–23424

Short Communications

First record and DNA barcode of a scarab beetle, *Adoretus kanarensis* Arrow, 1917 (Coleoptera: Scarabaeidae: Rutelinae), from Maharashtra, India

– Pranil Jagdale, Sujata Magdum, Aparna Sureshchandra Kalawate, Swapnil Kajale & Yogesh Shouche, Pp. 23425–23430

New record of *Lucilia cuprina* (Wiedemann, 1830) (Diptera: Calliphoridae) from the Trans-Himalayan Region, cold arid desert of Kargil Ladakh, India

– Mohd Hussain, Altaf Hussain Mir, Hidayatullah Tak & Nassreen Fatima Kacho, Pp. 23431–23435

On the occurrence of *Nitella myriotricha* A.Braun ex Kützing, 1857 ssp.

***acuminata* D.Subramanian, 1999 (Charophyceae: Charales: Characeae), from eastern India**

– Kailash Mondal & Jai Prakash Keshri, Pp. 23436–23440

Notes

Dark Clouds Ahead? Anecdotal evidence for an illegal live trade in Sunda *Neofelis diardi* and Indochinese *N. nebulosa* Clouded Leopards (Mammalia: Carnivora: Felidae)

– Anthony J. Giordano, Leah M. Winstead, Muhammad Ali Imron, Rustam, Jephthe Sompud, Jayaraj Vijaya Kumaran & Kurtis Jai-Chyi Pei, Pp. 23441–23445

Further photographic record of Asiatic Brush-tailed Porcupine *Atherurus macrourus* Linnaeus, 1758 (Mammalia: Rodentia: Hystricidae) from Manas National Park, Assam, India

– Urjit Bhatt, Bilal Habib & Salvador Lyngdoh, Pp. 23446–23448

Predation of the Nicobar Shrew *Crocidura nicobarica* by a Cattle Egret *Bubulcus ibis*

– G. Gokulakrishnan, C.S. Vishnu & Manokaran Kamalakannan, Pp. 23449–23451

War prompts distress symptoms in Israeli Blind Snake

– Shahr Dubiner, Shai Meiri & Eran Levin, Pp. 23452–23454

Further distribution records of *Varadia ambolensis* (Stylommatophora: Helicarionoidea) from the state of Goa

– Nitin Sawant, Shubham Rane, Sagar Naik, Seema Vishwakarma & Mayur Gawas, Pp. 23455–23457

***Eleocharis acutangula* ssp. *neotropica* D.J.Rosen (Cyperaceae): a new record for southern Western Ghats, India**

– Kavya K. Nair & A.R. Viji, Pp. 23458–23460

Book Review

Putting wetland science to practice: a review

– Review by Tiasa Adhya & Partha Dey, Pp. 23461–23462

Publisher & Host
