Abstract: The Eravikulam National Park (ENP) holds the largest remaining pristine patches of southern montane wet temperate forests and southern montane wet temperate grasslands of peninsular India. The study shows that ENP harbours 198 species of butterflies, constituting 60.73% of the butterflies recorded from Kerala and 59.10% of butterflies observed in Western Ghats (WG). Thirty-five species of butterflies seen in ENP have some level of endemism associated with them and 22 of them (52.38%) are strictly endemic to WG. Twenty-seven species are under the schedules of Indian Wildlife Act 1972 (WPA) and its amendments. This National Park has montane grassland-shola dependent super-endemics like *Neptis palnica* and *Telinga davisoni*. ENP also holds *Parantica nilgiriensis* a Near Threatened species and another 11 Western Ghats endemics, namely, *Telinga davisoni*, *T. oculus*, *Ypthima chenu*, *Y. ypthimoides*, *Arnetta mercara*, *Baracus hamptoni*, *B. subditus*, *Thoressa astigmata*, *T. evershedii*, *Oriens concinna*, and *Caltoris canaraica*, which are primary grass feeders. Eravikulam, on the Anamalai–High Range–Palni landscape, lies on a major path of the return migration of butterflies to Western Ghats before the north-east monsoons. Although well-protected, the ENP has anthropogenic pressures from tea estates surrounding it, mammal-oriented management practices like controlled burning of primary grasslands, and natural forest fires, that can significantly affect the invertebrate fauna especially montane grassland shola-dependent butterflies.

Competing interests: The authors declare no competing interests.

Author details: KALESH SADASIVAN works on natural history of Western Ghats, and is primarily interested in the ecology, taxonomy and distribution of butterflies, odonates, cicadas and ants. TOMS AUGUSTINE is a naturalist interested in birds, butterflies and odonates of Western Ghats especially their distribution patterns. E. KUNHIKRISHNAN is a retired faculty of Zoology, who has worked extensively on natural history and conservation of Western Ghats, and is a pioneer in butterfly research in Kerala. BAIJU, K. is a research associate in TNHS working on butterflies of Kerala and their lifecycles.

Author contributions: KS worked on the primary concept of this paper, did field surveys and drafted the Manuscript. TA helped with field surveys and editing of MS. EK shared field data and made comments on the MS. BK helped with field surveys and made edits on the MS.

Acknowledgements: The authors would like to thank the Kerala Forest Department for permissions for surveys and the members of Travancore Nature History Society (TNHS), Trivandrum, for their field assistance and support for the work.

INTRODUCTION

The Eravikulam National Park (ENP), was established in 1978. ENP with an area of 97 km², is located in the High Ranges (Kannan Devan Hills) of the Munnar landscape of southern Western Ghats (WG) in the Devikulam Taluk of Idukki district, Kerala State (Image 1) between 10.08–10.33 °N & 77.00–77.16 °E. The elevation ranges from 1,200 m on the slopes to 2,695 m at the summit of Anamudi, the highest point in peninsular India. The boundaries of the park extend into Anamalai Tiger Reserve in Tamil Nadu, Chinnar Wildlife Sanctuary, and Marayur forest division in the north & east, Mankulam & Munnar forest divisions in the south, and the Anamudi reserve forest under Munnar Forest Division in the west (Anonymous 2012). The terrain is undulating with vegetation mainly of montane wet temperate forests (sholas) and primary grasslands. Annual rainfall varies from 2,000 mm to 5,000 mm, with a short three-month dry season. The major fraction (up to 60%) of precipitation is received from the south-west monsoons. The temperature varies from 10.88±6.55 °C to 23.42±1.3 °C. Frost is a common phenomenon in winter (December–February). ENP is regionally important as a perennial catchment area for east-flowing tributaries of River Pambar, west-flowing tributaries of rivers Periyar and Chalakkudy (Nair 1991; Anonymous 2012). The ENP has good biodiversity with 132 species of birds, 20 species of amphibians, 13 species of reptiles, four species of fish, and 101 species of butterflies (Anonymous 2012). The major vegetation types of the ENP are the southern montane wet temperate forests, southern montane wet temperate grasslands, southern sub-tropical broad-leaved hill forest, southern west coast evergreen forest, and southern tropical moist deciduous forests (Image 2) (Anonymous 2012). The last two forest types are seen along the western and eastern boundaries respectively (Anonymous 2012). The ENP holds the last remaining undisturbed patches of southern montane wet temperate forests and southern montane wet temperate grasslands of Peninsular India (Nair 1991).

Previous works on butterfly diversity of ENP are very few. Ferguson (1891), was probably the first naturalist to work on butterflies of Munnar and the adjoining Pirmed (Peermedu) Plateau. The records from High Range of Munnar of the following species may be seen in his work on butterflies of Travancore: '*Rohana cambia* Moore' [*Rohana parisatis atacinus* Fruhstorfer, 1913, Black Prince], '*Argynnis niphe* Linnaeus' [*Argynnis castetsi* (Oberthür, 1891), Palni Fritillary], '*Colias*

nilagiriensis Felder' [*Colias nilagiriensis* Felder & Felder, 1859, Nilgiri Clouded Yellow], '*Catophaga galena* Felder' [*Appias wardii* (Moore, 1884), Sahyadri /Lesser/Ward's Albatross], and '*Ismene jaina* Moore' [*Burara jaina fergusonii* (de Nicéville, [1893]), Sahyadri Orange Awlet]. G.F. Hampson (1888) paid occasional visits to Anamalais, Mudis Hills, and Nelliampathies during his stay in Wayanad-Nilgiris but his major work was on the northern slopes of Nilgiris. No other historical works are specifically available for ENP, though some works are traceable from the adjoining landscapes bordering it. Evans (1910), compiled the first-ever checklist for Palnis and Kodaikanal on the eastern side of the High Range and listed 191 species. In Evans (1910), J. Evershed added a note in on the migration of butterflies in the Palnis landscape. Ugarte & Rodricks (1960) added 54 species to Evans (1910) list, and later Ghorpadé & Kunte (2010), updated the Palni checklist with a compilation of records from 1910 to 1960 and mentioned 310 species. Mathew et al. (2001) though worked on sholas of Idukki, namely, the Mannavan Shola (Anamudi Shola National Park) of the High Range landscape, with 66 species, no mention of the ENP was found. Palot (2012) reported migration of the Indian Dark Cerulean *Jamides bochus bochus* (Stoll, [1782]) from ENP. Sreekumar et al. (2018), based on a 4-month study provided a preliminary checklist of ENP with 85 species. The management plan of ENP published by the Kerala Forest Department has 101 species mentioned (Anonymous 2012). However, recent systematic surveys by Travancore Nature History Society (TNHS), Munnar Wildlife Division (MWD), and Kerala Forest Department (KFD) have revealed 88 species with some additions (Kalesh 2019). In this paper, we critically evaluate all the available published peer-reviewed records of butterflies from ENP including survey reports. A final checklist of butterflies from ENP is provided in light of our fieldwork since the year 2000.

MATERIALS AND METHODS

This paper is a critical compilation of the field data of the authors including distribution, larval host and migration, recorded over the last two decades from ENP. The previous literature on butterflies of the region and the adjoining landscapes Ferguson (1891), Hampson (1888), Evans (1910), Ugarte & Rodricks (1960), Ghorpadé & Kunte (2010), Palot (2012), Sreekumar et al. (2018), and (Kalesh 2019) were reviewed. The data logged in the management plan published by the KFD (Anonymous 2012) was also consulted, as well as the

Image 1. Map of Eravikulam National Park.

reports submitted by TNHS to MWD, KFD on faunal survey of MWD done in 2016, 2018, 2020, and 2021. In addition, the field data of the authors from previous visits to the region was also added. The standard transect methodology (3 km in 3 hours) was employed in field surveys with strategically placed basecamps covering all habitats and elevational gradients of ENP. The core region was assessed in Anamudi, Eravikulam, Poovar, Varattukulam, Rajamalai, Kolukkan, Meenthotty, and Bhadrakali Shola. The boundaries were assessed by visiting Njandala, Pothumala, Chinna-Poovar, Vaguvarai, Lakkam, and Pettimudi. Occasional visits were done to wetter evergreen Edamalayar & Valparai slopes on the western and northern side and eastern dry slopes of Marayur & Chinnar. For all calculation purposes,

the butterflies recorded inside the ENP only were considered. The general taxonomic placement and checklists follow Evans (1932 & 1949), Wynter-Blyth (1957), Larsen (1987–88), Gaonkar (1996), Nitin et al. (2018), Kunte et al. (2022), and Sadasivan & Sengupta (2022, in press). Geographical divisions and landscapes follow Sankar (2013) with necessary modifications. The population status was determined in the ENP based on transect data with status as Very Common (VC) if seen in >75% transects, Common (C) if seen in 50–75%, Not Rare (NR) if is seen in 25–50% transects, Rare (R) in case seen in 5–25%, and Very Rare (VR) if seen in <5% of the transects. Doubtful records and stragglers are mentioned in the discussion part of each family. Detailed analysis of transects with biodiversity indices and

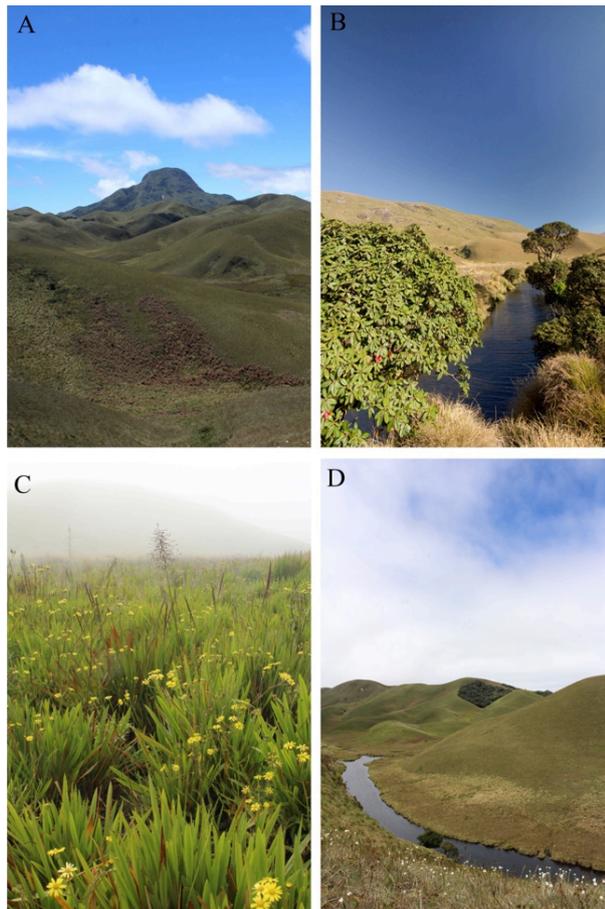

Image 2. Habitats shots of Eravikulam National Park: A—Southern montane wet temperate grasslands of Eravikulam near Anamudi peak | B—Riparian patches of grasses and *Rhododendron* trees | C—*Garnotia* grass patches in marshes and steam sides | D—Southern montane wet temperate forests (Sholas) and grasslands. © Kalesh Sadasivan.

conservation values shall be published elsewhere. The Red List status is derived from the IUCN site <http://www.iucnredlist.org> (IUCN 2021), based on global population assessments. Species with distribution restricted to habitats and subunits of a single landscape are referred to as super-endemics. The Palani Sailor *Neptis palnica* Eliot, 1969 from High Ranges of southern Western Ghats and Palani Bushbrown *Telinga davisoni* (Moore, [1891]) from Anjanad valley-Palani region of southern Western Ghats are known only from specific subregions inside the of the Munnar landscape and hence are examples of super-endemics (Image 3).

RESULTS AND DISCUSSION

Based on our field work we found 198 valid species records for ENP from our work. Western Ghats has 335

species and Kerala state has 326 species as per the latest estimates (Sadasivan & Sengupta, in press 2022). Thus, ENP harbours 60.73% of butterflies of Kerala and 59.10% species of butterflies seen in the WG.

Fourteen species of family Papilionidae were recorded out of the 19 (73.69%) species seen in Kerala and WG. The commonest of them was *Graphium teredon* (Felder & Felder, 1865). None of the endemic papilionids were recorded during the present study. The largest butterfly and the south Indian endemic *Troides minos* (Cramer, [1779]) was occasionally seen in the western boundaries. *Papilio dravidarum* Wood-Mason, 1880, and *Pachliopta pandiyana* (Moore, 1881) are mentioned in the management plan, but we have no records of this WG endemic, which may be seen in the wetter western slopes. *Papilio paris tamilana* Moore, 1881 is occasionally seen in the sholas and sub-tropical forests on the west, while *Papilio crino* Fabricius, 1793 was a very rare straggler from the eastern slopes.

Twenty-five species of Pierids were observed inside the ENP out of the 32 (78.13%) species in Kerala and 34 (73.53%) species in WG. *Colias nilagiriensis* Felder & Felder, 1859, and *Appias wardii* (Moore, 1884) were the WG endemics seen in the ENP. *Catopsilia pomona pomona* (Fabricius, 1775) and *Appias (Catophaga) albina swinhoei* (Moore, 1905) were the commonest species followed by *Eurema laeta laeta* (Boisduval, 1836) and *Eurema brigitta rubella* (Wallace, 1867) in our observation. *Eurema (Terias) nilgiriensis* (Yata, 1990), *Prioneris sita* (Felder & Felder, 1865), *Appias libythea* (Fabricius, 1775), and *Pareronia hippia* (Fabricius, 1787) are possible stragglers from the low evergreen side on the west (<1,000 m), while *Colotis fausta fulvia* (Wallace, 1867) is occasionally encountered on the western slopes, and *Pareronia hippia* (Fabricius, 1787) on the eastern slopes. However, there are no confirmed records of these species inside the ENP.

Nymphalidae had the highest number of butterflies in ENP with 70 species recorded of the 97 (72.16%) in Kerala and 100 (70%) in WG. Amongst the subfamilies of Nymphalidae, Satyrinae topped the numbers with 20 species followed by Limenitidinae (14 species) and Nymphalinae 10 (species). This is not surprising as the major part of the landscape is covered in grass (Poaceae), the larval hostplant of most Satyrines. *Ypthima ypthimoides* (Moore, 1881), *Lethe rohria neelgheriensis* (Guérin-Méneville, 1843), *Ypthima baldus baldus* (Fabricius, 1775), and *Ypthima huebneri* Kirby, 1871 were the most common Satyrines encountered. *Ochlandra* sp. dependent species like *Zipaetis saitis* Hewitson, 1863 and *Parantirrhoa marshalli* Wood-

Mason, 1881 are yet to be found in the ENP but may be seen in the lower western slopes, while the dry species *Ypthima ceylonica* Hewitson, 1865, may occur on the eastern slopes. *Telinga davisoni* (Moore, [1891]) *Telinga oculus* Marshall, 1881, *Ypthima ypthimoides* (Moore, 1881), and *Ypthima chenu* (Guérin-Méneville, 1843) are grassland depended endemic Satyrines. Of these, *Telinga davisoni* (Moore, [1891]) is endemic to the landscape and Palnis. *Argynnis castetsi* (Oberthür, 1891), *Neptis palnica* Eliot, 1969 and *Parantica nilgiriensis* (Moore, 1877) are montane temperate shola Nymphalid endemics. *Charaxes psaphon imna* Butler, 1870, *Charaxes schreiber wardii* (Moore, 1896), *Idea malabarica* (Moore, 1877), *Kallima horsfieldii* Kollar, [1844], *Cethosia mahratta* Moore, 1872, and *Dophla evelina laudabilis* Swinhoe, 1890, are reported on the western lower slopes, but not inside the ENP, while *Byblia ilithyia* (Drury, [1773]) and *Symphaedra nais* (Forster, 1771) are rare stragglers of the eastern dry Chinnar slopes.

Of the two species of Riodinidae seen in Kerala and WG, only one species—*Abisara echerius prunosa* Moore, 1879—has been recorded from ENP.

Of the 100 species of Lycaenidae in WG and 97 in Kerala, 42 species have been reported from ENP. *Celatoxia albidisca* (Moore, [1884]) is the only endemic species of lycaenid recorded here. Polyommata subfamily had 31 taxa, the maximum number of species, Theclinae had only nine, Miletinae had one species, while Curetinae was unrepresented. Interestingly none of the three dependent species from tribe *Arhopalini* were recorded. *Azanus jesous gamra* (Lederer, 1855) and *Azanus ubaldus* (Stoll, [1782]) are dryland species seen on the eastern slopes, but till now not recorded inside ENP. *Freyeria putli* (Kollar, [1844]) was a common species. *Creon cleobis cleobis* (Godart, [1824]), the sole representative of tribe lolaini -was not rare on the shola edges.

Forty-six species of Hesperidae were noted inside ENP, out of the 82 species seen in Kerala (56.09%) and WG (56.09%). Eight endemics were noted, they were primary grass feeders like *Arnetta mercara* Evans, 1932, *Baracus hamptoni* Elwes & Edwards, 1897, *Baracus subditus* Moore, [1884], and *Oriens concinna* (Elwes & Edwards, 1897). Some Bamboo and *Calamus* sp. feeding butterflies like *Thoressa evershedi* (Evans, 1910), *Caltoris canaraica* (Moore, [1884]), *Thoressa astigmata* (Swinhoe, 1890), and *Quedara basiflava* (de Nicéville, [1889]), were recorded occasionally from the western slopes. Sreekumar et al. (2018) reported *Tagiades litigiosa litigiosa* Möschler, 1878, and *Gerosis bhagava bhagava* (Moore, [1866]), both low-midland species from ENP. But, based on our field data these records are

Table 1. Summary of comparison of Western Ghats (WG), Kerala, and Eravikulam National Park (ENP) with respect to butterfly families, endemic status, IUCN Red List status, and legal protection under Indian Wildlife Protection Act 1972.

doubtful, and are possibly stragglers to high elevations, hence records of these are highly unlikely inside ENP, although these may be found on the western and eastern slopes at lower elevations.

Endemicity

Thirty-five species of butterflies from ENP had some kind of endemicity associated with them (Table 2). Twenty-two (52.38%) were strictly endemic to WG. Two papilionids, three pierids, eight nymphalids, one lycaenid, and eight hesperiids of ENP are endemic to the WG.

Table 2. Family-wise list of endemic species and their known distribution.

	Scientific name — Common name	Endemicity
1	<i>Troides minos</i> (Cramer, [1779]) — Sahyadri Birdwing	WG and SI
2	<i>Pachliopta pandiyana</i> (Moore, 1881) — Malabar Rose	WG
3	<i>Pachliopta Hector</i> (Linnaeus, 1758) — Crimson Rose	PI and SL
4	<i>Graphium tereodon</i> (Felder & Felder, 1865) — Narrow-banded Bluebottle	SI
5	<i>Papilio dravidarum</i> Wood-Mason, 1880 — Malabar Raven	WG
6	<i>Eurema (Terias) nilgiriensis</i> (Yata, 1990) — Sahyadri Grass Yellow	WG
7	<i>Colias nilgiriensis</i> Felder & Felder, 1859 — Nilgiri Clouded Yellow	WG
8	<i>Prioneris sita</i> (Felder & Felder, 1865) — Painted Sawtooth	SI and SL
9	<i>Appias wardii</i> (Moore, 1884) — Sahyadri Albatross / Ward's Albatross	WG
10	<i>Lethe drypetis todara</i> Moore, 1881 — Dakhan Treebrown	SI and SL
11	<i>Mycalesis patnia junonia</i> Butler, 1868 — Malabar Glad-eye Bushbrown	SI
12	<i>Mycalesis subdita</i> Moore, 1892 — Tamil Bushbrown	SI and SL
13	<i>Telinga davisoni</i> (Moore, [1891]) — Palni Bushbrown	WG
14	<i>Telinga oculus</i> Marshall, 1881 — Red-disc Bushbrown	WG
15	<i>Ypthima ceylonica</i> Hewitson, 1865 — White Four-ring	PI and SL
16	<i>Ypthima chenu</i> (Guérin-Méneville, 1843) — Nilgiri Four-ring	WG
17	<i>Ypthima ypthimoides</i> (Moore, 1881) — Palni Four-ring	WG
18	<i>Cethosia mahratta</i> Moore, 1872 — Sahyadri Lacewing	WG
19	<i>Argynnis castetsi</i> (Oberthür, 1891) — Palni Fritillary	WG
20	<i>Cirrochroa thais thais</i> (Fabricius, 1787) — Sahyadri Yeoman	SI and SL
21	<i>Neptis palnica</i> Eliot, 1969 — Palni/ Creamy Sailer	WG
22	<i>Parantica nilgiriensis</i> (Moore, 1877) — Nilgiri Tiger	WG
23	<i>Celatoxia albidisca</i> (Moore, [1884]) — White-disc Hedge Blue	WG
24	<i>Ianolyce helicon viola</i> (Moore, 1877) — Sri Lankan Pointed Lineblue	WG and SL
25	<i>Cigaritis schistacea</i> (Moore, [1881]) — Plumbeous Silverline	PI and SL

32	<i>Thoressa evershedi</i> (Evans, 1910) — Travancore Tawny Ace	WG
33	<i>Oriens concinna</i> (Elwes & Edwards, 1897) — Sahyadri Dartlet	WG
34	<i>Potanthus diana</i> (Evans, 1932) — Chinese Dart	PI
35	<i>Calotis canaraica</i> (Moore, [1884]) — Karwar Swift	WG

WG—Western Ghats | PI—Peninsular India | SL—Sri Lanka | SI—Southern India.

IUCN Red List

Eighteen species are under the Red List of IUCN, in accordance with the global population status. Except for *Parantica nilgiriensis* in the Near Threatened category, all others are under Least Concern. In addition *Pachliopta pandiyana* (Moore, 1881) and *Byblia ilithyia* (Drury, [1773]) are stragglers to the ENP under the Least Concern category (Table 3).

WPA 1972

Twenty-seven species from ENP were under the schedules of WPA and its amendments. Two species are in schedule I, one in both schedule I&II, 17 under schedule II, and four under schedule IV (Table 4). Of them *Charaxes schreiber wardii* (Moore, 1896), *Dophla evelina laudabilis* Swinhoe, 1890, *Prioneris sita* (Felder & Felder, 1865), and *Appias libythea* (Fabricius, 1775) were stragglers.

Butterfly Migration in ENP

Eravikulam falls in the main migration path of Anamalai–High Range–Palni landscape. The major passage is the return migration before the northeast monsoons towards the Western Ghats. The major family of this migration is the nymphalids, though the process starts with the pierids. There are two paths followed by the migrants, one is from the Amaravati Valley through Marayur gap and the other is from Palnis. The butterflies ascend into the ENP plateau through the Olikudi, and similar valleys on the eastern slopes of Marayur and Chinnar, passing through Poovar and descend into Valparai and Edamalayar valleys, finally dispersing into the lower Periyar landscape. Major component of the migration are danaines like *Tirumala septentrionis dravidarum* Fruhstorfer, 1899, *Euploea core core* (Cramer, [1780]), *Tirumala limniace exoticus* (Gmelin, 1790), *Danaus chrysippus chrysippus* (Linnaeus, 1758), and *Euploea sylvester coreta* (Godart, 1819). The pierid component is *Catopsilia pomona pomona* (Fabricius, 1775), *Appias (Catophaga) albina swinhoei* (Moore, 1905), and *Appias wardii* (Moore, 1884). Lycaenids like *Jamides bochus bochus* (Stoll, [1782]) & *Lampides boeticus* (Linnaeus, 1767) and hesperiids like *Pelopidas agna agna* (Moore, [1866]) & *Pelopidas mathias mathias* (Fabricius, 1798) also migrate. The onward migration from Western Ghats to Tamil Nadu plains and the Eastern Ghats is less striking and obvious. List of migrating butterflies is given in Table 5.

CONCLUSIONS

This paper critically summarises the butterfly fauna of ENP. A total of 198 species of butterflies were recorded from ENP including point endemics like *Neptis palnica* Eliot, 1969, and *Telinga davisoni* (Moore, [1891]) found only in this landscape. These are montane grassland-shola depended species. Moreover, ENP also holds *Parantica nilgiriensis* (Moore, 1877) a Near Threatened species, and another 11 Western Ghat endemics namely: Palni Bushbrown *Telinga davisoni* (Moore, [1891]), Red-disc Bushbrown *Telinga oculus* Marshall, 1881, Nilgiri Four-ring *Ypthima chenu* (Guérin-Méneville, 1843), Palni Four-ring *Ypthima ypthimoides* (Moore, 1881), Coorg Forest Bob *Arnetta mercara* Evans, 1932, Malabar Hedge Hopper *Baracus hampsoni* Elwes & Edwards, 1897, Yellow-striped Hedge Hopper *Baracus subditus* Moore, [1884], Unbranded Ace *Thoressa astigmata* (Swinhoe, 1890), Travancore Tawny Ace *Thoressa evershedii* (Evans, 1910), Sahyadri Dartlet *Oriens concinna* (Elwes

27	<i>Pelopidas subochracea subochracea</i> (Moore, 1878) — Bengal Large Branded Swift	IV

& Edwards, 1897), and Karwar Swift *Caltoris canaraica* (Moore, [1884]), which are primary grass (Poaceae) feeders.

During the field work we observed that even though well-protected, the ENP is facing pressures from forest/grassland fires, anthropogenic effects like use of pesticides and invasive flora from tea estates on

its borders. Invasive alien species from tea estates like Eucalyptus and Wattle colonise the fringes of ENP, must be systematically removed. The tourism zone is highly vulnerable due to the constant human and vehicular

movement during the dry season. There is marginal grazing in and around the boundary of the National Park. Fire is the most alarming threat to the shola grassland ecosystem (Anonymous 2012).

In addition, the Nilgiri Tahr, *Nilgiritragus hylocrius* (Ogilby, 1838) (the flagship-mammal) oriented forest management practices, like controlled burning of primary grasslands, significantly affect the invertebrate fauna like grasshoppers (Bhaskar et al. 2019), and hence herb/grass feeding butterflies. ENP being the last patch of undisturbed montane shola-grasslands of peninsular India, needs urgent changes in management practices for survival of grassland and shola-dependent endemic invertebrate species.

Reviewers 2019–2021

Due to pausivity of space, the list of reviewers for 2018–2020 is available online.

The opinions expressed by the authors do not reflect the views of the Journal of Threatened Taxa, Wildlife Information Liaison Development Society, Zoo Outreach Organization, or any of the partners. The journal, the publisher, the host, and the partners are not responsible for the accuracy of the political boundaries shown in the maps by the authors.

Print copies of the Journal are available at cost. Write to:
 The Managing Editor, JoTT,
 c/o Wildlife Information Liaison Development Society,
 No. 12, Thiruvannamalai Nagar, Saravanampatti - Kalapatti Road,
 Saravanampatti, Coimbatore, Tamil Nadu 641035, India
 ravi@threatenedtaxa.org

Journal of Threatened Taxa is indexed/abstracted in Bibliography of Systematic Mycology, Biological Abstracts, BIOSIS Previews, CAB Abstracts, EBSCO, Google Scholar, Index Copernicus, Index Fungorum, JournalSeek, National Academy of Agricultural Sciences, NewJour, OCLC WorldCat, SCOPUS, Stanford University Libraries, Virtual Library of Biology, Zoological Records.

NAAS rating (India) 5.64

OPEN ACCESS

The Journal of Threatened Taxa (JoTT) is dedicated to building evidence for conservation globally by publishing peer-reviewed articles online every month at a reasonably rapid rate at www.threatenedtaxa.org. All articles published in JoTT are registered under [Creative Commons Attribution 4.0 International License](https://creativecommons.org/licenses/by/4.0/) unless otherwise mentioned. JoTT allows unrestricted use, reproduction, and distribution of articles in any medium by providing adequate credit to the author(s) and the source of publication.

Article

Identification of confiscated pangolin for conservation purposes through molecular approach

– Wirdateti, R. Taufiq P. Nugraha, Yulianto & Gono Semiadi, Pp. 21127–21139

Communications

The trade of Saiga Antelope horn for traditional medicine in Thailand

– Lalita Gomez, Penthai Siriwat & Chris R. Shepherd, Pp. 21140–21148

The occurrence of Indochinese Serow *Capricornis sumatraensis* in Virachey National Park, northeastern Cambodia

– Gregory McCann, Keith Pawlowski & Thon Soukhon, Pp. 21149–21154

Attitudes and perceptions of people about the Capped Langur *Trachypithecus pileatus* (Mammalia: Primates: Cercopithecidae): a preliminary study in Barail Wildlife Sanctuary, India

– Rofik Ahmed Barbhuiya, Amir Sohail Choudhury, Nazimur Rahman Talukdar & Parthankar Choudhury, Pp. 21155–21160

Feather characteristics of Common Myna *Acridotheres tristis* (Passeriformes: Sturnidae) from India

– Swapna Devi Ray, Goldin Quadros, Prateek Dey, Padmanabhan Pramod & Ram Pratap Singh, Pp. 21161–21169

Population and distribution of Wattled Crane *Bugeraeus carunculatus*, Gmelin, 1989 at lake Tana area, Ethiopia

– Shimelis Aynalem Zelelew & George William Archibald, Pp. 21170–21178

Waterbird assemblage along Punatsangchhu River, Punakha and Wangdue Phodrang, Bhutan

– Nima & Ugyen Dorji, Pp. 21179–21189

Freshwater fishes of the Chimmony Wildlife Sanctuary, Western Ghats, India

– P.S. Eldho & M.K. Sajeevan, Pp. 21190–21198

Butterflies of Eravikulam National Park and its environs in the Western Ghats of Kerala, India

– Kalesh Sadasivan, Toms Augustine, Edayillam Kunhikrishnan & Baiju Kochunarayanan, Pp. 21199–21212

The dragonflies and damselflies (Insecta: Odonata) of Shendurney Wildlife Sanctuary, southern Western Ghats, India

– Kalesh Sadasivan, Vinayan P. Nair & K. Abraham Samuel, Pp. 21213–21226

A pioneering study on the spider fauna (Arachnida: Araneae) of Sagar District, Madhya Pradesh, India

– Tanmaya Rani Sethy & Janak Ahi, Pp. 21227–21238

Taxonomy and threat assessment of *Lagotis kunawurensis* Rupr (Plantaginaceae), an endemic medicinal plant species of the Himalaya, India

– Aijaz Hassan Ganie, Tariq Ahmad Butt, Anzar Ahmad Khuroo, Nazima Rasool, Rameez Ahmad, Syed Basharat & Zafar A. Reshi, Pp. 21239–21245

The study of algal diversity from fresh water bodies of Chimmony Wildlife Sanctuary, Kerala, India

– Joel Jose & Jobi Xavier, Pp. 21246–21265

Review

A checklist of herpetofauna of Telangana state, India

– Chelmala Srinivasulu & Gandla Chethan Kumar, Pp. 21266–21281

Viewpoint

Comments on “The Dragonflies and Damselflies (Odonata) of Kerala – Status and Distribution”

– A. Vivek Chandran & K. Muhamed Sherif, Pp. 21282–21284

Short Communications

Landings of IUCN Red Listed finfishes at Chetlat Island of Lakshadweep, southeastern Arabian Sea

– Davood Nihal, N.M. Naseem, N. Abhirami & M.P. Prabhakaran, Pp. 21285–21289

First report of the termite *Glyptotermes ceylonicus* (Blattodea: Isoptera: Kalotermitidae) from India: an example of discontinuous distribution

– Edwin Joseph, Chinnu Ipe, Nisha P. Aravind, Sherin Antony & Jobin Mathew, Pp. 21290–21295

Authentic report of the emesine bug *Gardena melinarthrum* Dohrn, 1860 (Hemiptera: Heteroptera: Reduviidae) from India

– Sangamesh R. Hiremath, Santana Saikia & Hemant V. Ghate, Pp. 21296–21301

Reappearance of stomatopod *Gonodactylus platysoma* (Wood-Mason, 1895) after an era from the intertidal region of Chota Balu, South Andaman, India

– N. Muthu Mohammed Naha, Limaangnen Pongener & G. Padmavati, Pp. 21302–21306

Range extension of earthworm *Drawida impertusa* Stephenson, 1920 (Clitellata: Moniligastridae) in Karnataka, India

– Vivek Hasyagar, S. Prasanth Narayanan & K.S. Sreepada, Pp. 21307–21310

Pelatantheria insectifera (Rchb.f.) Ridl. (Orchidaceae): a new generic record for Eastern Ghats of Andhra Pradesh, India

– V. Ashok Kumar, P. Janaki Rao, J. Prakasa Rao, S.B. Padal & C. Sudhakar Reddy, Pp. 21311–21314

Notes

New breeding site record of Oriental White Ibis *Threskiornis melanocephalus* (Aves: Threskiornithidae) at Thirunavaya wetlands, Kerala, India

– Binu Chullakattil, Pp. 21315–21317

Rediscovery of *Gardena melinarthrum* Dohrn from Sri Lanka

– Tharindu Ranasinghe & Hemant V. Ghate, Pp. 21318–21320

A report on the occurrence of the cicada *Callogaeana festiva* (Fabricius, 1803) (Insecta: Cicadidae) from Mizoram, India

– Khawhrling Marova, Fanai Malsawmdawngliana, Lal Muansanga & Hmar Tlawmte Lalremsanga, Pp. 21321–21323

New distribution records of two species of metallic ground beetles of the genus *Chlaenius* (Coleoptera: Carabidae: Chlaeniini) from the Western Ghats, India

– Duraikannu Vasanthakumar & Erich Kirschenhofer, Pp. 21324–21326

Report of *Euphaea pseudodispar* Sadasivan & Bhakare, 2021 (Insecta: Odonata) from Kerala, India

– P.K. Muneer, M. Madhavan & A. Vivek Chandran, Pp. 21327–21330
