## Checklist of the genus *Dendrobium* Sw. (Orchidaceae) in Manipur, India

Hidangmayum Bishwajit Sharma<sup>1</sup> & Debjyoti Bhattacharyya<sup>2</sup>

<sup>1,2</sup> Plant Taxonomy and Biosystematics Laboratory, Department of Life Science & Bioinformatics, Assam University, Silchar, Assam 788011, India.

<sup>1</sup> Present address: Nachou Mayai Leikai, Bishnupur District, Manipur 795126, India.

<sup>1</sup> [hbishwajitsharma@gmail.com](mailto:hbishwajitsharma@gmail.com), <sup>2</sup> [debjyoti\\_bsi@yahoo.co.in](mailto:debjyoti_bsi@yahoo.co.in) (corresponding author)

**Abstract:** An enumeration of the genus *Dendrobium* Sw. (Orchidaceae) in Manipur, India was attempted. Literature review revealed the occurrence of 67 species under the genus from the state. The study was carried out through repeated field explorations in different natural forests of Manipur since 2012. Out of the total taxa reported from the state, only 42 species could be traced in the field. All these taxa are presented here with their flowering phenology and places of occurrence. Twenty-five species were untraceable in the field; however, nine species out of these 25 are represented by authentic herbarium specimens and supported by published documents. The remaining 16 species were reported only in literature, but no live plants or herbarium specimens were found. Out of the 42 species inventoried from the field, many taxa are under threat owing to habitat loss due to felling of trees, deforestation, and 'jhum' cultivation. So, there is an urgent need of conservation of those species through in situ and ex situ means for their sustenance. A photographic plate of some taxa is provided here which might be useful for their easy identification in the field and for taking care of their conservation. Large-scale uses of these species as cut flowers and indoor & outdoor plants may be practised through micropropagation and cultivation in nurseries which may help in revenue generation for the state.

**Keywords:** conservation, inventorization, northeastern India, orchid, threats.

**Editor:** Pankaj Kumar, Department of Plant and Soil Science, Texas Tech University, Lubbock, Texas, USA.

**Date of publication:** 26 July 2023 (online & print)

**Funding:** DST, Government of India, New Delhi.

**Competing interests:** The authors declare no competing interests.

**Author details:** DR. HIDANGMAYUM BISHWAJIT SHARMA did his research on the morpho-taxonomic studies on the genus *Dendrobium* in Manipur and was awarded PhD under the supervision of Dr. Debjyoti Bhattacharyya. Presently, he is serving as a Government employee under the State Government of Manipur. DR. DEBJYOTI BHATTACHARYYA is an associate professor in the Department of Life Science & Bioinformatics, Assam University, Silchar. He acted as the supervisor of Dr. H. Bishwajit Sharma.

**Author contributions:** First author (HBS) collected the specimens from the field, worked out, identified, prepared the specimens for the herbarium and drafted the manuscript. Corresponding author (DB) supervised the work, checked the manuscript and communicated it to the journal.

**Acknowledgements:** Authors are thankful to the head, Department of Life Science & Bioinformatics, Assam University, Silchar for facilities. First author is grateful to Mr. H. Kipgen, president (FEEDS & KVK, Hengbung) and the DST, Government of India, New Delhi for providing facilities and financial support during the study.

## INTRODUCTION

The members of Orchidaceae Juss. are well known in the world for their beautiful and ineffable flowers of different colours, hues, and forms. Taxonomically, Orchidaceae is one of the most diversified and evolved families of flowering plants (Kumar & Manilal 1994). There is a vast range of diversity in the shape, colour, and size of orchid flowers; yet they are the same in their basic form (Pradhan 2005). Theophrastus (370–285 B.C.) named the group of bizarre plants as ‘Orchids’ finding resemblance of below-ground paired tubers with male testicles.

*Dendrobium* Sw. is the second largest genus of the family Orchidaceae after *Bulbophyllum* Thouars. It was established by Olavo (Peter) Swartz in 1799. The name was derived from the Greek words ‘dendron’ (tree) and ‘bios’ (life) which means ‘one who lives on trees’, or essentially ‘epiphytes’. The genus is divided into 14 sections, viz.: *Bolbidium*, *Callista*, *Dendrobium*, *Breviflores*, *Formosae*, *Stachyobium*, *Pedilonum*, *Distichophyllum*, *Rhopalanthe*, *Aporum*, *Oxystophyllum*, *Strongyle*, *Grastidium*, and *Conostalix* (Seidenfaden 1985). The genus is sympodial with varying length of pseudobulbs. Most of the species are generally epiphytic or occasionally lithophytic in nature. They have adapted themselves to a wide variety of habitats starting from high altitudes to lowland tropical forests. They remain dormant during winter but quickly grow in summer. In spring, occasionally in autumn, dormant buds come out from the base of the pseudobulb followed by fast growth of new roots. Most of the *Dendrobiums* flower during the pre-monsoon season (March–May) and a few species blossom in the post-monsoon period. Capsules are produced late in the dry season (August–December).

The genus *Dendrobium* comprises about 3,160 species (Govaerts et al. 2022) with high morphological diversity and is mainly distributed in Sino-Himalayan regions with further extension up to Australia, New Zealand, and Pacific Islands (Wood 2006). In India, the genus is represented by c. 117 species (Rao 2022), of which, about 88 species are found in northeastern India (Rao 2018).

A checklist of the genus *Dendrobium* in Manipur was prepared from different literature (Mukerjee 1953; Deb 1956, 1957, 1960, 1961; Phukan 1996; Chauhan 2001; Kumar & Kumar 2005; Nanda et al. 2012, 2013, 2014; Kishor et al. 2013; Meitei et al. 2014; Khuraijam et al. 2016; Deori et al. 2019), which documents the occurrence of 67 species in the state.

## MATERIALS AND METHODS

### Study area

The state of Manipur, a part of Indo-Burma Biodiversity Hotspot, is bounded by Nagaland in the north, Mizoram in the south, Assam in the west, and Myanmar (Burma) in the east as well as in the south (Image 1). The state lies between the coordinates 23°83′–25°68′ N and 93°03′–94°78′ E. The total geographical area covered by the state is 22,327 km<sup>2</sup>. The total forest cover of Manipur is 17,219 km<sup>2</sup>, which is 77.12% of the total geographical area of the state. The state lies in a unique geographical position between the virtual meeting point of India and southeastern Asia (Singh 2014) with a total boundary of 854 km length. The altitude varies 50–3,000 m.

Based on the topography, structure, geology, the location's relief, and other geographical conditions, Manipur can be divided into two major natural physiographic divisions, viz.: (i) The Manipur hills and mountains and (ii) The Manipur valleys. Five major types of forests are prevalent in the state. These are: 1. Subtropical semi-evergreen forests, 2. Subtropical deciduous forests, 3. Montane wet temperate forests, 4. Subtropical pine forests, and 5. Subtropical dry temperate forests (Singh 2014).

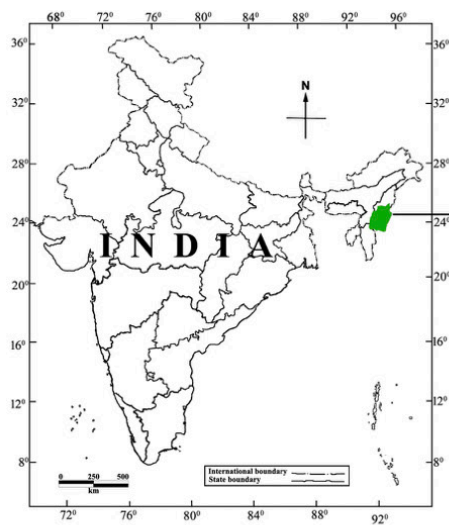

### Field survey and data collection

For the present study, several field explorations were conducted in different places of Manipur since 2012 (Table 1). Field surveys were made covering all seasons, although pre-monsoon and post-monsoon are the best collection seasons for the orchids especially for the genus *Dendrobium*. Locations were noted with their altitudes and geographical coordinates. A total of 58 sites were visited (Table 1). Surveys were conducted for at least 3–5 days at each location.

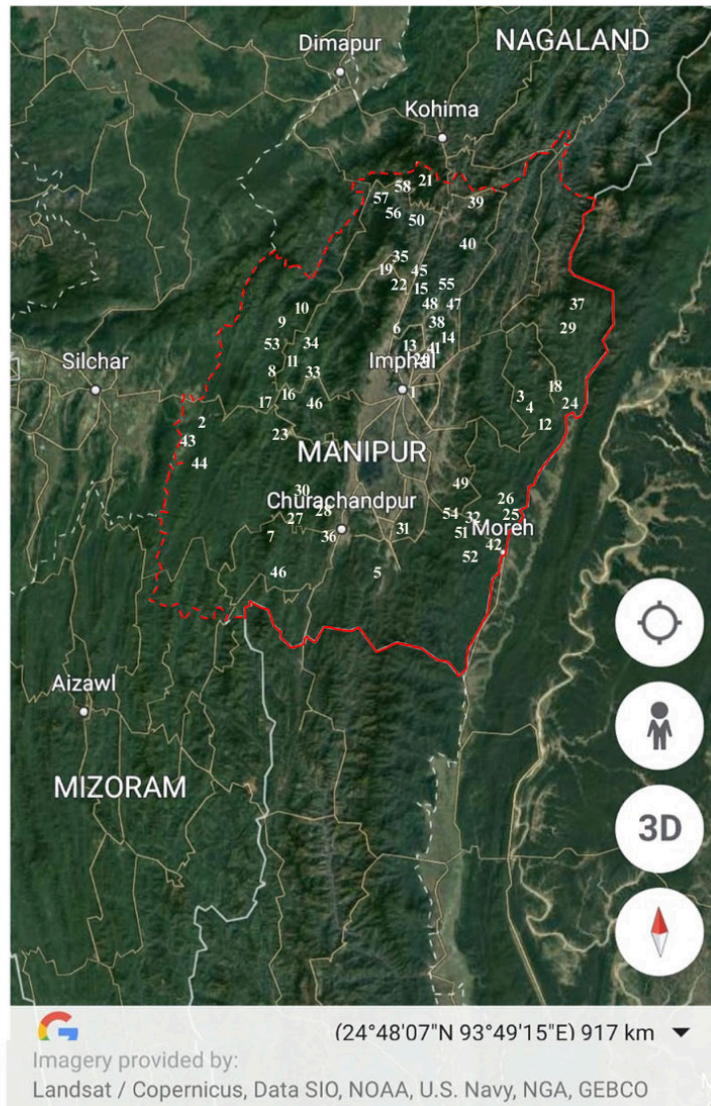

### Identification of species

After collection, identification of species was done using standard methods of morpho-taxonomic studies. Flowers were dissected and critically studied under Stereo Zoom dissecting microscope (Olympus SZ61). Species without flowering were collected in a vegetative stage and grown in the nursery of the orchidarium of Centre for Orchid Gene Conservation of Eastern Himalayan Region (COGCEHR), Hengbung, Kangpokpi district, Manipur. These species were studied after they bloomed in the orchidarium. Morphological attributes were noted and identification of the species for all taxa were made using primary and secondary sources of

information, i.e., flora, monographs, articles, and books (Hooker 1890; Seidenfaden 1985; Kumar & Kumar 2005; Wood 2006; Lucksom 2007). Identity of the species was further confirmed by matching the specimens with the types and authentic herbarium specimens housed in the Central National Herbarium, Botanical Survey of India, Howrah (CAL) and Eastern Regional Centre, Botanical Survey of India, Shillong (ASSAM). Online databases, viz., The International Plant Names Index (IPNI 2022), Plants of the World Online (POWO 2022), Tropicos (2022), and The World Flora Online (WFO 2023) were consulted for updated nomenclature. Global Biodiversity Information Facility (GBIF 2023) was also browsed for digital images of species. Jain & Rao (1977) and Singh & Subramaniam

(2008) were followed for preparation of herbarium sheets. Specimens were deposited in the Central Herbarium of Assam University, Silchar (AUSCH), Assam.

## RESULTS

Out of the 14 sections of the genus *Dendrobium* (Seidenfaden 1985), species occurring in the state of Manipur are represented by eight sections (Table 2). In the field, the authors could locate only 42 species out of the 67 species recorded earlier from the state. Among these, 25 species could not be found in the wild, nine species are represented by herbarium specimens and

Table 2. List of species of *Dendrobium* located in their natural wild habitats in Manipur with flowering phenology, occurrence, and exsiccata.

authenticated by published documents (Table 3) and 16 species were mentioned in literature without any representative specimens from Manipur (Table 4).

All the collected species by the authors are presented here with their scientific and vernacular names, phenology, distribution in the state (Table 2). Photographs of the species which are very rare in the field are provided to ease the identification of the taxa.

Among the 42 collected species from the state under eight sections, the dominant section was *Dendrobium* which was represented by 23 species. It was followed by the section *Formosae* (6 spp.), *Callista* (4 spp.), *Stachyobium* (3 spp.), *Breviflores* (2 spp.), and *Pedilonum* (2 spp.). Sections *Aporum* and *Grastidium* were found to be represented by a single species each. Some species like *D. chrysanthum*, *D. chrysotoxum*, and *D. crepidatum* were very common throughout the state. In contrast, *D. bensoniae*, *D. capillipes*, *D. lindleyi*, *D. salaccense*, and *D. tamenglongense* were rare in the study area in some localized pockets.

## DISCUSSION

Manipur, a part of the Indo-Burma Biodiversity Hotspot (Myers et al. 2000), is one of the orchid rich states in northeastern India. Owing to its geographical location, serene forest cover, and humid climatic conditions, the state is blessed with rich plant genetic resources including orchids. Out of the 67 species reported from the state, only 42 species were seen in the field during this study. Further field surveys are needed to confirm the occurrence of the rest of the 25 species in the state.

Epiphytic *Dendrobium* species are found growing on trunks of small and large trees in tropical and

Table 4. List of reported *Dendrobium* species not traced in the field condition as well as in the herbaria; only known from earlier literature.

	Scientific name	Reference of the report
1.	<i>Dendrobium acinaciforme</i> Roxb.	Deori et al. (2019)
2.	<i>Dendrobium aduncum</i> Lindl.	Deori et al. (2019)
3.	<i>Dendrobium anceps</i> Sw.	Deori et al. (2019); Kumar & Kumar (2005)
4.	<i>Dendrobium dantaniense</i> Guillaumin	Deori et al. (2019)
5.	<i>Dendrobium farmeri</i> Paxton	Deori et al. (2019); Kumar & Kumar (2005)
6.	<i>Dendrobium gratiosissimum</i> Rchb.f.	Deori et al. (2019); Kumar & Kumar (2005)
7.	<i>Dendrobium hookerianum</i> Lindl.	Deori et al. (2019)
8.	<i>Dendrobium jaintianum</i> Sabap.	Deori et al. (2019)
9.	<i>Dendrobium khasianum</i> Deori	Deori et al. (2019)
10.	<i>Dendrobium linguella</i> Rchb.f.	Deori et al. (2019); Kumar & Kumar (2005)
11.	<i>Dendrobium mannii</i> Ridl.	Deori et al. (2019)
12.	<i>Dendrobium numaldeorii</i> C.Deori, Hynn. & Phukan	Deori et al. (2019)
13.	<i>Dendrobium peguanum</i> Lindl.	Deori et al. (2019)
14.	<i>Dendrobium pendulum</i> Roxb.	Deori et al. (2019); Kumar & Kumar (2005)
15.	<i>Dendrobium sulcatum</i> Lindl.	Deori et al. (2019)
16.	<i>Dendrobium thysiflorum</i> B.S.Williams	Deori et al. (2019); Kumar & Kumar (2005)

sub-tropical forests in association with other orchid species viz. *Bulbophyllum candidum*, *B. careyanum*, *B. cariniflorum*, *B. gamblei*, *B. sunipia*, *Coelogyne corymbosa*, *C. griffithii*, *C. nitida*, *Cymbidium aloifolium*, *C. erythraeum*, *Pholidota articulata*, *P. imbricata*, *Pinalia acervata*, and *P. amica*.

Few *Dendrobium* species, viz., *Dendrobium aphyllum*, *D. crepidatum*, *D. devonianum*, *D. fimbriatum* and *D. nobile* grew as epiphytic as well as lithophytic conditions in tropical and sub-tropical forests.

A—*Dendrobium aphyllum* | B—*Dendrobium bensoniae* | C—*Dendrobium cumulatum* | D—*Dendrobium draconis* | E—*Dendrobium lindleyi* | F—*Dendrobium longicornu* | G—*Dendrobium parcum* | H—*Dendrobium parishii* | I—*Dendrobium salaccense* | J—*Dendrobium sinominutiflorum* | K—*Dendrobium stuposum* | L—*Dendrobium tamenglongense*. © H. Bishwajit Sharma.

Some of the host tree species of *Dendrobiums* in Manipur are *Artocarpus chaplasha*, *Bauhinia purpurea*, *Mangifera indica*, *Michelia champaca*, *Quercus serreta*, *Schima wallichii*, *Terminalia elliptica*, and *Toona ciliata*.

Loss of natural habitats particularly due to tree felling, shifting (Jhum) cultivation practices, construction of hydro-electric dam, railway tracks, and other urbanization practices cause rapid loss of plant genetic resources. As most of the species are epiphytic, illegal trade of timber species also affect their natural habitats resulting in their extermination from the field. So, for survival of the species, continuous monitoring is mandatory at regular interval. As most of the species are very showy, ex situ cultivation is suggested for revenue generation.

### Predicting suitable habitat for the endangered Javan Gibbon in a submontane forest in Indonesia

– Rahayu Oktaviani, Amaël Borzée, Andi Nugraha Cahyana, Susan Lappan, Ani Mardiasuti & Misbah Satria Giri, Pp. 23463–23471

### Babesa Sewage Treatment Plant as a vital artificial wetland habitat for a multitude of avian species

– Pelden Nima, Mahendra Timsina, Tenzin Jamtsho & Pema Khandu, Pp. 23472–23486

## Communications

### Proximate nutrients of selected forage and the diet composition of adult elephants in Udawalawe National Park, Sri Lanka, a preliminary study

– I.V. Dinithi Hemachandra, C. Dilrukshi Wijayarathna & P. Nihal Dayawansa, Pp. 23487–23498

### Does small mammal species richness have a bimodal elevation gradient in Sikkim Himalaya?

– Sunita Khatiwara, Joya Thapa & Ajith Kumar, Pp. 23499–23506

### Re-sighting record of Kelaart's Pipistrelle *Pipistrellus ceylonicus* (Kelaart, 1852) (Mammalia: Chiroptera: Vespertilionidae) from Rajasthan, India

– Dharmendra Khandal, Dau Lal Bohra & Shyamkant S. Talmale, Pp. 23507–23513

### An assessment of the diet of Brown Fish-Owl *Ketupa zeylonensis* (J.F. Gmelin, 1788) (Aves: Strigiformes: Strigidae) from two localities in the foothills of the Western Ghats of Goa, India

– Stephen Jonah Dias & Atul Sinai Borker, Pp. 23514–23520

### Tree cover and built-up area regulate the territory size in Eurasian Magpie *Pica pica* in Ladakh, India

– Iqbal Ali Khan, Anil Kumar, Dinesh Bhatt & Prakhar Rawal, Pp. 23521–23528

### Birds of Kanetiya area - inventory, notable sightings, and overview of seasonal changes in reporting frequency of bird species in an unprotected area of Himachal Pradesh, India

– Samakshi Tiwari, Pp. 23529–23544

### A preliminary assessment of Odonata (dragonflies & damselflies) across an elevation gradient – insights from Shiwaliks to Alpines, northwestern Himalaya, India

– Neeraj Sharma, Dinesh Singh, Shakha Sharma & Ajaz Ansari Pp. 23545–23556

### Checklist of soil nematode diversity from Udupi District, Karnataka, India

– M.V. Keshava Murthy & A. Shwetha, Pp. 23557–23566

### Checklist of the genus *Dendrobium* Sw. (Orchidaceae) in Manipur, India

– Hidangmayum Bishwajit Sharma & Debjyoti Bhattacharyya, Pp. 23567–23574

### Status of macrofungal diversity in the wet evergreen forests of Agasthyamala Biosphere Reserve, Western Ghats, India

– Kurunna Kandy Akshaya, Arumugam Karthikeyan & Cheravengat Kunhikannan, Pp. 23575–23586

### Developing a fast, reproducible, and simple protocol for virtual lichen herbarium using barcoding and QR code techniques

– S. Jeya Preethi & P. Ponmurugan, Pp. 23587–23595

## Short Communications

### Population status of Oriental Darter *Anhinga melanogaster* Pennant, 1769 (Aves: Suliformes: Anhingidae) in Keoladeo National Park, India

– Neha Imtiyaz & Satish Kumar, Pp. 23596–23600

### Breeding of Himalayan Vulture *Gyps himalayensis* Hume, 1869 (Aves: Accipitriformes: Accipitridae) in the Assam State Zoo, Guwahati, Assam, India

– Sachin Ranade, Jay Gore & Ashwini Kumar, Pp. 23601–23605

## Notes

### Unusual foraging behaviour of the Bengal Slow Loris *Nycticebus bengalensis* (Lacépède, 1800) (Mammalia: Primates: Lorisidae) in the Shan Highlands, Myanmar

– Sai Sein Lin Oo, Khun Aung Naing Oo & Paul Jeremy James Bates, Pp. 23606–23609

### Powerline pylons: an unusual nesting success of White-bellied Sea-Eagle *Haliaeetus leucogaster* (Gmelin, 1788) (Aves: Accipitriformes: Accipitridae) from Ramanathapuram, southeastern coast of India

– H. Byju, N. Raveendran & A.J. Mathiyazhagan, Pp. 23610–23614

### First record of Horned Grebe *Podiceps auritus* (Linnaeus, 1758) (Aves: Passeriformes: Podicipedidae) from Jammu & Kashmir, India

– Bilal Nasir Zargar, Umer Nazir & Zakir Hussain Najjar, Pp. 23615–23617

### First photographic record of White Royal *Tajuria illurgis illurgis* (Hewitson, [1869]) (Insecta: Lepidoptera: Lycaenidae) from Arunachal Pradesh, India

– Ruksha Limbu, Roshan Upadhaya, Renu Gogoi & Jyoti Gaur, Pp. 23618–23620

### Preliminary observations of moth fauna of Purna Wildlife Sanctuary, Gujarat, India

– Preeti Choudhary & Indu Sharma, Pp. 23621–23626

### *Argyreia lawii* C.B. Clarke (Convolvulaceae) – an extended distribution record in the Western Ghats of Kerala

– A. Raja Rajeswari & M.K. Nisha, Pp. 23627–23630
