## Ichthyofaunal diversity and conservation status of Nagaland, India: a comprehensive review

Rejuba Pongen<sup>1</sup> & Pranay Punj Pankaj<sup>2</sup>

<sup>1</sup>Department of Zoology, Fazl Ali College, Mokokchung, Nagaland 798601, India.

<sup>2</sup>Department of Zoology, Nagaland University, Lumami, Nagaland 798627, India.

<sup>1</sup>r.pongen@gmail.com, <sup>2</sup>pranaypunj@gmail.com (corresponding author)

**Abstract:** Nagaland, located within the Indo-Burma biodiversity hotspot, is home to a rich diversity of freshwater fish species. However, the region's ichthyofaunal diversity and conservation status are inadequately documented, hindering effective conservation planning. This study aims to provide a comprehensive assessment of the ichthyofaunal diversity in Nagaland and evaluate the conservation status of these species. Systematic review of secondary sources, including research articles, technical reports, and taxonomic records, was conducted. Data were gathered through an extensive literature search across databases like Scopus, Web of Knowledge, and Google Scholar to capture studies on ichthyofaunal diversity and conservation in Nagaland. Keywords like “freshwater fish” and “conservation status” were used, ensuring thorough coverage. Fish species were classified by taxonomic standards, with conservation status based on the IUCN Red List. This study documented 202 fish species across 12 orders, 29 families and 91 genera. The Cyprinidae family was the most dominant, representing 79 species. Conservation status revealed that seven species are classified as ‘Endangered’ (EN), 15 as ‘Near Threatened’ (NT), and 17 as ‘Vulnerable’ (VU), while 6.93% of species remain ‘Data Deficient’ (DD). The primary threats to ichthyofaunal diversity in Nagaland include habitat degradation, over-exploitation, invasive species, and climate change. These findings underscore the urgent need for continuous biodiversity assessments and implementing sustainable management practices to preserve Nagaland's aquatic biodiversity.

**Keywords:** Assessment, biodiversity hotspot, climate change, Cyprinidae, endemism, freshwater fish, habitat degradation, IUCN Red List, ichthyofauna, Indo-Burma biodiversity hotspot, invasive species, overexploitation, species richness, taxonomic diversity, threat assessment.

**Competing interests:** The authors declare no competing interests.

**Author details:** DR. PRANAY PUNJ PANKAJ, associate professor of Zoology at Nagaland University, India. His research focuses on ichthyofaunal diversity, indigenous fisheries knowledge, and aquatic conservation. He has led multiple funded projects and published extensively, and actively mentors research scholars. MR. REJUBA PONGEN, assistant professor of Zoology at Fazl Ali College, Nagaland, India, with over 13 years of teaching experience. He holds an MSc from NEHU and is currently pursuing a PhD at Nagaland University, focusing on ichthyofaunal diversity and conservation in northeastern India.

**Author contribution:** RP conceptualized the study, conducted ichthyofaunal data collection, performed data analysis, and drafted the manuscript. PPP supervised the research, critically reviewed and edited the manuscript, and served as the corresponding author, ensuring scholarly rigor and coherence.

**Acknowledgments:** The authors acknowledge all researchers whose work is cited. PPP gratefully acknowledges financial support from ICAR–National Bureau of Fish Genetic Resources, Lucknow. The authors also thank policymakers and local communities for their contributions to ichthyofaunal research and conservation in Nagaland.

## INTRODUCTION

Freshwater ecosystems do not only support fish species but also many other aquatic species. Despite covering less than 1% of the Earth's surface, these habitats including rivers, lakes, and wetlands are home to over 40% of all fish species and approximately 10% of the world's documented species, including a quarter of all vertebrates (Strayer & Dudgeon 2010). The global fish fauna comprises around 17,948 marine species and 18,397 freshwater species (Fricke et al. 2022), with fish accounting for nearly half of all vertebrate species. However, human activities such as population growth and economic development have placed immense pressure on freshwater ecosystems. Habitat degradation, over-exploitation, the introduction of alien species, river flow alterations, and pollution pose significant risks to aquatic biodiversity, contributing to the high extinction rates observed in freshwater species (Dudgeon et al. 2006). This underscores the importance of monitoring and conserving ichthyofaunal diversity to ensure ecosystem stability and sustainability.

Nagaland, a small hilly state in northeastern India, is geographically positioned between 25.100°–27.067° N and 93.033°–95.017° E, encompassing an area of 16,579 km<sup>2</sup>. Assam borders the state to the west, Myanmar to the east, Arunachal Pradesh and Assam to the north, and Manipur to the south. The eastern Himalayan region is recognized as one of the world's most biodiversity-rich regions (Biswas & Boruah 2000). With altitudes ranging 194–3,048 m and an average annual rainfall of 2,000–2,700 mm, Nagaland possesses rich inland water resources, including rheophilic rivers and streams. Three major drainage systems, the Barak, Brahmaputra, and Chindwin, divide the state's river systems, traversing 16 districts through 11 major and 10 minor rivers (Ao et al. 2008).

### Ichthyofaunal diversity and river Systems

The major rivers of Nagaland include the Dhansiri, Dikhu, Doyang, Intangki, Meguiki, Milak, Tizit, Tizu, Tsurang, Shili and Zungki, while the minor rivers consist of Arachu, Chathe, Chokla, Dzulakie, Dzuna, Lanyi, Likhimro, Seidzu, Tepuiki, and Tesuru (Tables 1 & 2). Figure 1 illustrates the river network of Nagaland, providing a detailed representation of the state's hydrological features. These rivers form the backbone of the state's aquatic ecosystem, supporting a diverse range of fish species. However, comprehensive documentation of ichthyofaunal diversity across these different drainage systems remains incomplete.

Several scholars have documented the ichthyofaunal diversity of Nagaland. Ao et al. (2008) catalogued the fish species present in the state, identifying 149 distinct species. Goswami et al. (2012) enumerated 187 fish species from the state. Bendangkokba & Ahmed (2007) reported 66 fish species across 16 families and five orders from the Milak, Dikhu, and Tsurang rivers in Mokokchung district. Ezung et al. (2020) recently compiled a list of fish species from the state, identifying 197 species over 10 orders, 26 families, and 87 genera. Kechu & Pankaj (2025) documented high ichthyofaunal richness in the Dikhu River, Nagaland, characterized by the dominance of Cypriniformes and the presence of threatened and data-deficient species under increasing anthropogenic pressure. Similarly, Khesoh et al. (2025) demonstrated that the Tsurang and Milak rivers of Mokokchung District, Nagaland, despite being smaller tributaries, support substantial fish diversity, including species of conservation concern. Recent discoveries have significantly advanced our comprehension of the ichthyofaunal variety in Nagaland (Figure 2). Although there have been recent contributions to the state fish fauna, the species compositions in numerous water bodies remain undocumented and require further investigation. The inaccessibility of most rivers, situated in steep, mountainous regions characterized by dense forest cover, prevents the examination of many lotic systems in the state.

According to current study, Nagaland is home to 202 fish species. Despite significant increases in the documented number of fish species in the state, there is still a significant amount of work to fully explore and document the ichthyofaunal diversity in many of Nagaland's rivers, particularly in remote and challenging landscapes with dense forest vegetation. The exploration of these lotic systems is far from complete, and further research is necessary to discover and protect the species that inhabit these underexplored areas. The ichthyofaunal diversity in Nagaland is significant yet remains inadequately documented. Continued efforts in research and conservation are crucial for comprehensively understanding and safeguarding the diverse aquatic biodiversity of this region.

## MATERIALS AND METHODS

### Study Design and Objectives

The study aimed to review the ichthyofaunal diversity and assess the conservation status of freshwater fish species in Nagaland, India. By analyzing

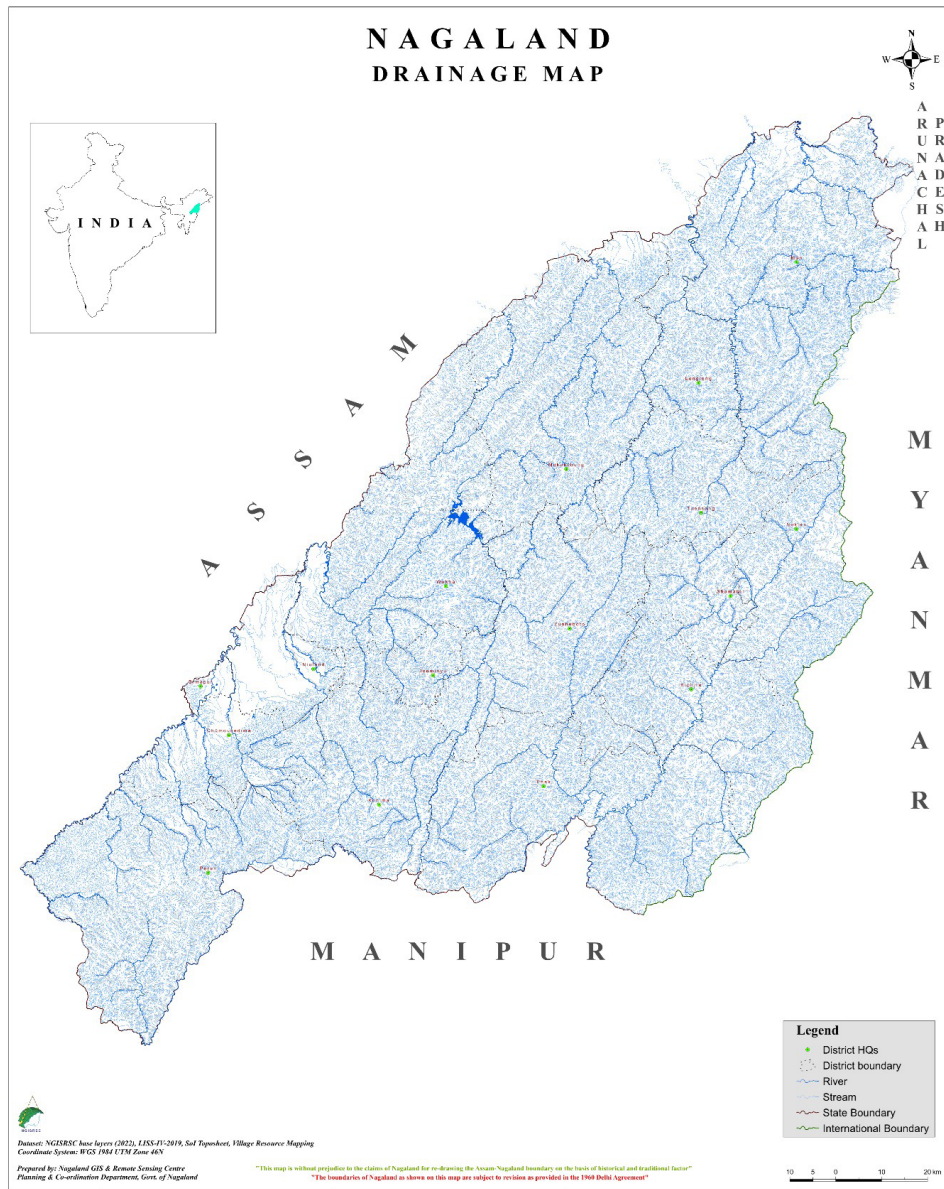

Figure 1. Nagaland State drainage map. (Source: Nagaland GIS & Remote Sensing Centre, accessed on 17.xi.2024)

secondary data on taxonomy, distribution, economic importance, habitat preferences, and conservation status, the goal was to provide a detailed understanding of the region’s fish diversity and highlight the need for conservation efforts.

**Data Sources and Literature Search**

An extensive literature search was conducted using databases like Scopus, Web of Knowledge, Google Scholar, and other repositories to identify peer-reviewed articles, reports, and books on Nagaland’s ichthyofaunal diversity and conservation status. Search terms included “ichthyofaunal diversity,” “freshwater

fish,” “conservation status,” and “Nagaland”. Publications from all the available years were included. Manual searches of key references were also performed to ensure comprehensive coverage, providing a robust dataset for analysis and capturing studies that may have been overlooked.

**Inclusion and Exclusion Criteria**

The initial screening process involved reviewing the titles and abstracts of all retrieved articles to assess their relevance to the study objectives. Studies were included if they provided detailed information on the freshwater fish species of Nagaland, including aspects

such as taxonomy, distribution, economic importance, habitat, and conservation status. Articles that did not meet these criteria, such as those focused on marine species or unrelated geographical areas, were excluded from the analysis. Full-text reviews were conducted for studies that passed the initial screening to confirm their relevance and inclusion in the final dataset.

### Data Extraction and Compilation

Data were meticulously extracted from the selected studies, focusing on several key parameters:

- **Taxonomy and Nomenclature:** The classification of fish species followed the taxonomy outlined by Nelson (2016). Each species' scientific name was cross-checked with Eschmeyer's Catalogue of fish, a globally recognized database for fish species, to ensure the accuracy and validity of the taxonomic information.

- **Economic Importance:** Information on the

economic significance of each species, such as, their use in local fisheries, aquaculture, or as ornamental fish, was collected.

- **Fin Formula and Morphological Traits:** Details regarding the fin formula, a key aspect of fish morphology, were documented. This included the number and arrangement of fins, which is crucial for species identification and classification.

- **Habitat and Distribution:** Data on the natural habitats of the fish species, including the types of water bodies they inhabit (e.g., rivers, streams, lakes) and their geographical distribution within Nagaland, were compiled.

- **Food Habits:** The dietary preferences of the fish species were documented, providing insights into their ecological roles within freshwater ecosystems.

- **Conservation Status:** The conservation status of each species was assessed using the IUCN Red List categories and criteria (Allen et al. 2010). Species were categorized as 'Not Evaluated' (NE), 'Data Deficient' (DD), 'Least Concern' (LC), 'Near Threatened' (NT), 'Vulnerable' (VU), or 'Endangered' (EN) based on their risk of extinction.

### Data Analysis

The extracted data were systematically organized and analyzed using descriptive methods. This involved calculating the frequency and distribution of species across different taxonomic groups, habitat types, and conservation statuses. The results were presented in tables and charts to provide a clear and comprehensive overview of the ichthyofaunal diversity in Nagaland.

## RESULT AND DISCUSSION

The study identified 202 fish species across 12 orders, 29 families, and 87 genera in Nagaland, India. The family Cyprinidae exhibited the highest diversity with 79 species, followed by Sisoridae with 26 species, and Nemacheilidae with 16 species (Figure 4). Other families, including Bagridae and Channidae, also showed notable diversity with 12 and six species, respectively. This diversity underscores the ecological richness of Nagaland's freshwater systems.

A systematic list of fish species and their IUCN conservation status (Table 3) reveals that most are classified as 'Least Concern', with some listed as 'Vulnerable' or 'Endangered'. About 6.93% are 'Data Deficient', highlighting the need for further research (Figure 3). Threats to these species include habitat

Figure 2. Timeline of newly discovered fish species in Nagaland, India.

Figure 3. Pie charts showing the percentages of fish under different IUCN threat categories in Nagaland.

degradation, over-exploitation, and pollution. While many species are currently stable, the presence of ‘Vulnerable’ and ‘Endangered’ species indicates risks to their populations (Table 4).

Recent years have brought the discovery of new species such as *Garra chathensis* in the Chathe River, *Badis limaakumi* in the Milak River, and *Psilorhynchus kosyginii* in the Tepuiki River. These findings reflect Nagaland’s role in contributing to global ichthyofaunal knowledge and emphasize the need for continued research and conservation. The discovery of these new species also suggests the potential for additional undiscovered species in Nagaland’s rivers, which are valuable for understanding evolutionary and biogeographic patterns.

Biogeographically, Nagaland’s ichthyofauna shares patterns with neighbouring Himalayan and Brahmaputra regions, particularly the dominance of Cyprinidae. Species unique to Nagaland suggest localized speciation, likely driven by its complex topography and microhabitats. Species distributions across the Brahmaputra, Barak, and Irrawaddy drainage systems reflect Nagaland’s role as a biogeographic crossroads, shaped by historical river capture and geological events.

**CONCLUSION**

In conclusion, Nagaland’s freshwater ecosystems, rich in biodiversity, play a critical role in global ichthyofaunal diversity. Despite covering a limited geographic area, the state supports 202 fish species across various families, with notable diversity within the Cyprinidae family. The state’s unique river systems and mountainous topography, which create diverse aquatic habitats, facilitate this high species richness. However, increasing human activities, including habitat destruction, overexploitation, and pollution, pose serious threats to these ecosystems. As a result, many species face extinction risks, with several categorized as ‘Vulnerable’ or ‘Endangered’, while others remain ‘Data Deficient’, indicating a pressing need for further research.

However, the ichthyofauna in this region faces pressing threats from habitat degradation, pollution, over-exploitation, and flow alterations due to human activity, leading to high extinction risks for vulnerable species. Although recent discoveries, such as *Garra chathensis*, *Badis limaakumi*, and *Psilorhynchus*

*kosyginii*, have enhanced the documentation of local biodiversity, further research is necessary, especially in remote areas. Continued efforts to study, monitor, and conserve Nagaland's fish diversity are essential for maintaining ecosystem stability, protecting species from extinction, and contributing valuable knowledge to global freshwater biodiversity conservation initiatives.

Table 4. Threatened fish species under the IUCN Red List in Nagaland.

Scientific name	IUCN Red List category	Threats	Criteria IUCN (ver 3.1)	Conservation actions needed
<i>Amblyceps arunachalense</i> Nath & Dey, 1989	EN	1. Mining & quarrying 2. Fishing & harvesting aquatic resources	B1ab(iii)	1. Land/water protection 2. Land/water management
<i>Schistura kangjupkhulensis</i> (Hora, 1921)	EN	1. Destructive fishing methods 2. Human intrusions & disturbance	A3c+4ac; B2ab(iii,iv,v)	1. Land/water protection 2. Land/water management 3. Education & awareness 4. Law & policy
<i>Mustura sijuensis</i> (Menon, 1987)	EN	1. Mining & quarrying 2. Logging & wood harvesting	B1ab(iii)	1. Land/water protection 2. Land/water management 3. Species management 4. Education & awareness 5. Law & policy
<i>Clarias magur</i> (Hamilton, 1822)	EN	1. Domestic & urban waste water 2. Agricultural & forestry effluents 3. Fishing & harvesting aquatic resources 4. Invasive non-native	A3cde+4acde	1. Land/water protection 2. Land/water management 3. Species management 4. Education & awareness 5. Law & policy 6. Livelihood, economic & other incentives
<i>Tor putitora</i> (Hamilton, 1822)	EN	1. Housing & urban areas 2. Mining & quarrying 3. Fishing & harvesting aquatic resources 4. Recreational activities 5. Dams & water management/use 6. Domestic & urban waste water 7. Agricultural & forestry effluents 8. Habitat shifting & alteration 9. Droughts 10. Storms & flooding	A2abcd	1. Species management 2. Education & awareness 3. Law & policy
<i>Schistura nagaensis</i> (Menon, 1987)	VU	1. Annual & perennial non-timber crops. 2. Agricultural & forestry effluents	B1ab(iii).	1. Site/area protection 2. Site/area management 3. Habitat & natural process restoration
<i>Mustura prashadi</i> (Hora, 1921)	VU	1. Housing & urban areas 2. Domestic & urban waste water 3. Agricultural & forestry effluents	B1ab(iii)	1. Site/area protection 2. Resource & habitat protection 3. Site/area management 4. Habitat & natural process restoration 5. Awareness & communications
<i>Schistura reticulofasciata</i> (Singh & Bănărescu, 1982)	VU	1. Logging & wood harvesting 2. Other ecosystem modifications	B1ab(iii); D2.	1. Site/area protection 2. Resource & habitat protection 3. Site/area management 4. Habitat & natural process restoration 5. Species management 6. Species recovery 7. Ex-situ conservation 8. Awareness & communications 9. Legislation 10. Policies and regulations
<i>Schistura singhi</i> (Menon, 1987)	VU	1. Annual & perennial non-timber crops 2. Dams & water management/use	B1ab(iii); D2	More research is needed on distribution, life history, population, trends, habitat, and impacts of threat.
<i>Oreochromis mossambicus</i> (Peters, 1852)	VU	1. Invasive non-native/alien species/ diseases	A4ae	1. Site/area protection 2. Invasive/problematic species control 3. Awareness & communications Policies and regulations
<i>Botia rostrata</i> (Günther, 1868)	VU	1. Housing & urban areas 2. Mining & quarrying 3. Fishing & harvesting aquatic resources	A2cd	Impact of threats on the species distribution and population requires detailed studies.
<i>Cyprinion semiplotum</i> (McClelland, 1839)	VU	1. Fishing & harvesting aquatic resources 2. Other ecosystem modifications	A2acde+3cde	1. Resource & habitat protection 2. Harvest management 3. Legislation at International level 4. Livelihood, economic & other incentives (Substitution)
<i>Cyprinus carpio</i> Linnaeus, 1758	VU	1. Transportation & service corridors (Shipping lanes) 2. Dams & water management/use 3. Introduced genetic material	A2ce	1. Site/area management 2. Invasive/problematic species control 3. Habitat & natural process restoration
<i>Devario naganensis</i> (Chaudhuri, 1912)	VU	1. Dams & water management/use	B1ab(iii)	More research is needed on distribution, life history, population, trends, habitat, and impacts of threat.

Scientific name	IUCN Red List category	Threats	Criteria IUCN (ver 3.1)	Conservation actions needed
<i>Opsarius dogarsinghi</i> (Hora, 1921)	VU	1. Human intrusions & disturbance	B1ab(iii)	Resource & habitat protection
<i>Pethia shalynius</i> (Yazdani & Talukdar, 1975)	VU	1. Mining & quarrying	B1ab(iii)	More research is required on distribution, biology, population, habitat, trends and threats to the species
<i>Schizothorax richardsonii</i> (Gray, 1832)	VU	1. Tourism & recreation areas 2. Fishing & harvesting aquatic resources 3. Dams & water management/use 4. Invasive non-native/alien species/diseases 5. Other threat	A2acd+3cde+4acde	1. Site/area protection 2. Resource & habitat protection 3. Site/area management 4. Invasive/problematics species control 5. Species recovery 6. Species re-introduction 7. Ex-situ conservation 8. Formal education 9. Awareness & communications 10. Policies and regulations
<i>Wallago attu</i> (Bloch & Schneider, 1801)	VU	1. Fishing & harvesting aquatic resources 2. Recreational activities 3. Domestic & urban waste water 4. Agricultural & forestry effluents 5. Droughts 6. Storms & flooding	A2d	1. Resource & habitat protection 2. Harvest management
<i>Bagarius bagarius</i> (Hamilton, 1822)	VU	1. Fishing & harvesting aquatic resources 2. Dams & water management/use	A2d	More information about the population size and trend, as well as the effect of fishing and other anthropogenic activities on the global population, is needed.
<i>Glyptothorax saisii</i> (Jenkins, 1910)	VU	1. Mining & quarrying 2. Logging & wood harvesting	B1ab(iii)+2ab(iii); D2	Data on the species' population status, distribution, and associated threats is needed
<i>Glyptothorax manipurensis</i> Menon, 1955	VU	1. Dams & water management/use	B2ac(ii)	1. The potential threats to this species require more thorough and immediate study.
<i>Myersglanis jayarami</i> Vishwanath & Kosygin, 1999	VU	1. Annual & perennial non-timber crops 2. Fishing & harvesting aquatic resources	B1ab(iii)	1. Further investigation into the distribution and biology of this species is necessary due to the lack of adequate information currently available.
<i>Anguilla bengalensis</i> (Gray, 1831)	NT	1. Housing & urban areas 2. Commercial & industrial areas 3. Oil & gas drilling 4. Mining & quarrying 5. Renewable energy 6. Fishing & harvesting aquatic resources 7. Dams & water management/use 8. Invasive non-native 9. Domestic & urban waste water 10. Industrial & military effluents 11. Agricultural & forestry effluents	A2cd	1. Species management 2. Education & awareness
<i>Balitora Brucei</i> Gray, 1830	NT	1. Mining & quarrying 2. Agricultural & forestry effluents	-----	1. Site/area protection 2. Resource & habitat protection 3. Site/area management 4. Ex-situ conservation
<i>Neonoemacheilus assamensis</i> (Menon, 1987)	NT	1. Fishing & harvesting aquatic resources	-----	1. Site/area protection
<i>Garra graveleyi</i> (Annandale, 1919)	NT	1. Human intrusions & disturbance 2. Domestic & urban waste water	-----	1. Resource & habitat protection
<i>Garra rupecula</i> (McClelland, 1839)	NT	1. Mining & quarrying 2. Logging & wood harvesting 3. Dams & water management/use	-----	1. Resource & habitat protection 2. Awareness & communications
<i>Hypophthalmichthys molitrix</i> (Valenciennes, 1844)	NT	1. Fishing & harvesting aquatic resources 2. Dams & water management/use 3. Domestic & urban waste water 4. Industrial & military effluents 5. Agricultural & forestry effluents	-----	1. Wild population should be monitored.
<i>Labeo pangusia</i> (Hamilton, 1822)	NT	1. Fishing & harvesting aquatic resources	-----	1. Awareness & communications

Scientific name	IUCN Red List category	Threats	Criteria IUCN (ver 3.1)	Conservation actions needed
<i>Neolissochilus hexagonolepis</i> (McClelland, 1839)	NT	1. Commercial & industrial areas 2. Tourism & recreation areas 3. Annual & perennial non-timber crops 4. Wood & pulp plantations 5. Mining & quarrying 6. Roads & railroads 7. Logging & wood harvesting 8. Dams & water management/use 9. Domestic & urban waste water 10. Industrial & military effluents	-----	1. Site/area protection 2. Resource & habitat protection 3. Site/area management 4. Habitat & natural process restoration 5. Harvest management 6. Awareness & communications 7. Legislation at National Level 8. Compliance and enforcement
<i>Neolissochilus hexastichus</i> (McClelland, 1839)	NT	1. Mining & quarrying 2. Logging & wood harvesting 3. Fishing & harvesting aquatic resources 4. Dams & water management/use	-----	1. Research 2. Biology of the fish
<i>Systemus clavatus</i> (McClelland, 1845)	NT	1. Mining & quarrying 2. Fishing & harvesting aquatic resources 3. Dams & water management/use	-----	1. Site/area protection
<i>Chitala chitala</i> (Hamilton, 1822)	NT	1. Fishing & harvesting aquatic resources 2. Other ecosystem modifications	-----	1. Site/area protection 2. Resource & habitat protection
<i>Ailia coila</i> (Hamilton, 1822)	NT	1. Fishing & harvesting aquatic resources	-----	1. Pollution and habitat destruction's impact on population declines needs more research.
<i>Ompok bimaculatus</i> (Bloch, 1794)	NT	1. Fishing & harvesting aquatic resources	-----	1. Harvest management 2. Awareness & communications
<i>Ompok pabda</i> (Hamilton, 1822)	NT	1. Fishing & harvesting aquatic resources	-----	1. Pollution and habitat destruction's impact on population declines needs more research.
<i>Rhyacoschistura manipurensis</i> (Chaudhuri, 1912)	NT	1. Dynamite and other destructive fishing 2. Human interference and poisoning	-----	1. Site/area protection

Dr. Robert D. Sluka, Chiltern Gateway Project, A Rocha UK, Southall, Middlesex, UK  
Dr. E. Vivekanandan, Central Marine Fisheries Research Institute, Chennai, India  
Dr. Davor Zanella, University of Zagreb, Zagreb, Croatia  
Dr. A. Biju Kumar, University of Kerala, Thiruvananthapuram, Kerala, India  
Dr. Akhilesh K.V., ICAR-Central Marine Fisheries Research Institute, Mumbai Research Centre, Mumbai, Maharashtra, India  
Dr. J.A. Johnson, Wildlife Institute of India, Dehradun, Uttarakhand, India  
Dr. R. Ravinesh, Gujarat Institute of Desert Ecology, Gujarat, India

#### Amphibians

Dr. Sushil K. Dutta, Indian Institute of Science, Bengaluru, Karnataka, India  
Dr. Annemarie Ohler, Muséum national d'Histoire naturelle, Paris, France

#### Reptiles

Dr. Gernot Vogel, Heidelberg, Germany  
Dr. Raju Vyasa, Vadodara, Gujarat, India  
Dr. Pritpal S. Soorae, Environment Agency, Abu Dhabi, UAE.  
Prof. Dr. Wayne J. Fuller, Near East University, Mersin, Turkey  
Prof. Chandrashekhar U. Rivonker, Goa University, Taleigao Plateau, Goa, India  
Dr. S.R. Ganesh, Kalinga Foundation, Agumbe, India.  
Dr. Himansu Sekhar Das, Terrestrial & Marine Biodiversity, Abu Dhabi, UAE

**Journal of Threatened Taxa** is indexed/abstracted in Bibliography of Systematic Mycology, Biological Abstracts, BIOSIS Previews, CAB Abstracts, EBSCO, Google Scholar, Index Copernicus, Index Fungorum, JournalSeek, National Academy of Agricultural Sciences, NewJour, OCLC WorldCat, SCOPUS, Stanford University Libraries, Virtual Library of Biology, Zoological Records.

NAAS rating (India) 5.64

#### Birds

Dr. Hem Sagar Baral, Charles Sturt University, NSW Australia  
Mr. H. Byju, Coimbatore, Tamil Nadu, India  
Dr. Chris Bowden, Royal Society for the Protection of Birds, Sandy, UK  
Dr. Priya Davidar, Pondicherry University, Kalapet, Puducherry, India  
Dr. J.W. Duckworth, IUCN SSC, Bath, UK  
Dr. Rajah Jayapal, SACON, Coimbatore, Tamil Nadu, India  
Dr. Rajiv S. Kalsi, M.L.N. College, Yamuna Nagar, Haryana, India  
Dr. V. Santharam, Rishi Valley Education Centre, Chittoor Dt., Andhra Pradesh, India  
Dr. S. Balachandran, Bombay Natural History Society, Mumbai, India  
Mr. J. Praveen, Bengaluru, India  
Dr. C. Srinivasulu, Osmania University, Hyderabad, India  
Dr. K.S. Gopi Sundar, International Crane Foundation, Baraboo, USA  
Dr. Gombobaatar Sundev, Professor of Ornithology, Ulaanbaatar, Mongolia  
Prof. Reuven Yosef, International Birding & Research Centre, Eilat, Israel  
Dr. Taej Mundkur, Wetlands International, Wageningen, The Netherlands  
Dr. Carol Inskipp, Bishop Auckland Co., Durham, UK  
Dr. Tim Inskipp, Bishop Auckland Co., Durham, UK  
Dr. V. Gokula, National College, Tiruchirappalli, Tamil Nadu, India  
Dr. Arkady Lelej, Russian Academy of Sciences, Vladivostok, Russia  
Dr. Simon Dowell, Science Director, Chester Zoo, UK  
Dr. Mário Gabriel Santiago dos Santos, Universidade de Trás-os-Montes e Alto Douro, Quinta de Prados, Vila Real, Portugal  
Dr. Grant Connette, Smithsonian Institution, Royal, VA, USA  
Dr. P.A. Azeez, Coimbatore, Tamil Nadu, India

#### Mammals

Dr. Giovanni Amori, CNR - Institute of Ecosystem Studies, Rome, Italy  
Dr. Anwaruddin Chowdhury, Guwahati, India  
Dr. David Mallon, Zoological Society of London, UK  
Dr. Shomita Mukherjee, SACON, Coimbatore, Tamil Nadu, India  
Dr. Angie Appel, Wild Cat Network, Germany  
Dr. P.O. Nameer, Kerala Agricultural University, Thrissur, Kerala, India  
Dr. Ian Redmond, UNEP Convention on Migratory Species, Lansdown, UK  
Dr. Heidi S. Riddle, Riddle's Elephant and Wildlife Sanctuary, Arkansas, USA  
Dr. Karin Schwartz, George Mason University, Fairfax, Virginia.  
Dr. Lala A.K. Singh, Bhubaneswar, Orissa, India  
Dr. Mewa Singh, Mysore University, Mysore, India  
Dr. Paul Racey, University of Exeter, Devon, UK  
Dr. Honnavalli N. Kumara, SACON, Anaikatty P.O., Coimbatore, Tamil Nadu, India  
Dr. Nishith Dharaiya, HNG University, Patan, Gujarat, India  
Dr. Spartaco Gippoliti, Socio Onorario Società Italiana per la Storia della Fauna "Giuseppe Altobello", Rome, Italy  
Dr. Justus Joshua, Green Future Foundation, Tiruchirappalli, Tamil Nadu, India  
Dr. H. Raghuram, Sri S. Ramasamy Naidu Memorial College, Virudhunagar, Tamil Nadu, India  
Dr. Paul Bates, Harison Institute, Kent, UK  
Dr. Jim Sanderson, Small Wild Cat Conservation Foundation, Hartford, USA  
Dr. Dan Challender, University of Kent, Canterbury, UK  
Dr. David Mallon, Manchester Metropolitan University, Derbyshire, UK  
Dr. Brian L. Cypher, California State University-Stanislaus, Bakersfield, CA  
Dr. S.S. Talmale, Zoological Survey of India, Pune, Maharashtra, India  
Prof. Karan Bahadur Shah, Budhanilakantha Municipality, Kathmandu, Nepal  
Dr. Susan Cheyne, Borneo Nature Foundation International, Palangkaraja, Indonesia  
Dr. Hemanta Kafley, Wildlife Sciences, Tarleton State University, Texas, USA

#### Other Disciplines

Dr. Aniruddha Belsare, Columbia MO 65203, USA (Veterinary)  
Dr. Mandar S. Paingankar, University of Pune, Pune, Maharashtra, India (Molecular)  
Dr. Jack Tordoff, Critical Ecosystem Partnership Fund, Arlington, USA (Communities)  
Dr. Ulrike Streicher, University of Oregon, Eugene, USA (Veterinary)  
Dr. Hari Balasubramanian, EcoAdvisors, Nova Scotia, Canada (Communities)  
Dr. Rayanna Hellem Santos Bezerra, Universidade Federal de Sergipe, São Cristóvão, Brazil  
Dr. Jamie R. Wood, Landcare Research, Canterbury, New Zealand  
Dr. Wendy Collinson-Jonker, Endangered Wildlife Trust, Gauteng, South Africa  
Dr. Rajeshkumar G. Jani, Anand Agricultural University, Anand, Gujarat, India  
Dr. O.N. Tiwari, Senior Scientist, ICAR-Indian Agricultural Research Institute (IARI), New Delhi, India  
Dr. L.D. Singla, Guru Angad Dev Veterinary and Animal Sciences University, Ludhiana, India  
Dr. Rupika S. Rajakaruna, University of Peradeniya, Peradeniya, Sri Lanka  
Dr. Bahar Baviskar, Wild-CER, Nagpur, Maharashtra 440013, India

#### Reviewers 2021–2023

Due to paucity of space, the list of reviewers for 2021–2023 is available online.

The opinions expressed by the authors do not reflect the views of the Journal of Threatened Taxa, Wildlife Information Liaison Development Society, Zoo Outreach Organization, or any of the partners. The journal, the publisher, the host, and the partners are not responsible for the accuracy of the political boundaries shown in the maps by the authors.

Print copies of the Journal are available at cost. Write to:  
The Managing Editor, JoTT,  
c/o Wildlife Information Liaison Development Society,

OPEN ACCESS

The Journal of Threatened Taxa (JoTT) is dedicated to building evidence for conservation globally by publishing peer-reviewed articles online every month at a reasonably rapid rate at [www.threatenedtaxa.org](http://www.threatenedtaxa.org). All articles published in JoTT are registered under [Creative Commons Attribution 4.0 International License](https://creativecommons.org/licenses/by/4.0/) unless otherwise mentioned. JoTT allows unrestricted use, reproduction, and distribution of articles in any medium by providing adequate credit to the author(s) and the source of publication.

ISSN 0974-7907 (Online) | ISSN 0974-7893 (Print)

May 2026 | Vol. 18 | No. 5 | Pages: 28739–29002

Date of Publication: 26 May 2026 (Online & Print)

DOI: 10.11609/jott.2026.18.5.28739-29002

## Articles

### Large mammal diversity of Vietnam's Chu Yang Sin National Park and the first experimental assessment of their vulnerability to snaring

– Minh Thi Anh Nguyen, Thuy Thi Bich Vo, Quy Tan Le, Vy Tran Nguyen, Vu Linh Nguyen, R.J. Timmins & Anthony J. Giordano, Pp. 28739–28749

### Rapid camera-trap assessment of mammals in Tripura, India: new records and implications for conservation

– Omkar Patil, Ashutosh Joshi, Rutuja Digaskar & Amey Parkar, Pp. 28750–28769

### Distribution, habitat use, and abundance of the Caracal *Caracal caracal* (Schreber, 1776) (Mammalia: Carnivora: Felidae) in a semi-arid Indian landscape

– Mohammad Mairaj, Dhruv Jain, Ramanand Bhakar & Ayan Sadhu, Pp. 28770–28783

### Avian richness and habitat selection patterns in Jhimil Jheel Conservation Reserve, Uttarakhand, India

– Ankita Das, Soumya Dasgupta & Ramesh Krishnamurthy, Pp. 28784–28806

### Herpetofauna of the Chitwan-Annapurna Landscape, Nepal: a comprehensive species checklist including occurrence in protected areas, with suggested conservation recommendations

– Santosh Bhattarai, Bishal Prasad Neupane, Bivek Gautam, Prabin Shrestha, Ashley R. Olson, Fiona Hogan & Wendy Wright, Pp. 28807–28829

### Dietary assessment of tadpoles of selected rhacophorid frogs (*Polypedates*, *Rhacophorus*, *Zhangixalus*) (Amphibia: Anura: Rhacophoridae) of Kangchup, Manipur, India

– Yumkham Shelina Devi & Saibal Sengupta, Pp. 28830–28837

### Eastern range record of the semiaquatic freshwater earthworm *Glyphidrilus gangeticus* Gates, 1958 (Clitellata: Crassicitellata: Almididae) from West Bengal, India, with a brief key to the Indian species of the genus

– M. Nurul Hasan, John Warren Reynolds, Hasko F. Nesemann, Shyamasree Ghosh & Chandra Kanta Mandal, Pp. 28838–28844

### Succession of biofouling organisms on structural materials and their environmental drivers off the Kalpakkam coast, India

– Bandita Badakumar, D. Inbakandan & P. Sriyutha Murthy, Pp. 28845–28861

### Addition of five lesser known angiosperm species from Mizoram, India

– R. Lalthantluanga, Dorothy Lalbiakhluni, Vanlalawmpuia Sailo, Rose Laldinaii Darnei, R. Lalhruaitluangi, Sanatombi Devi Yumkham & Sandhyarani Devi Khomdram, Pp. 28862–28873

### Legislative and evidentiary challenges faced by the Indian law enforcement agencies in social media-enabled wildlife offences

– Pradipty Bhardwaj, Jayadevan S. Nair & H.V. Girisha, Pp. 28874–28885

## Communications

### Occurrence and prevalence of gastrointestinal parasites in herbivores in Dampa Tiger Reserve, Mizoram, India

– G.S. Solanki, Lalrinkimi & Phoebe Lalremruati, Pp. 28886–28893

### Theileriosis in a captive Indian Gaur *Bos gaurus*: a rare encounter

– Kaushal Kumar, Vishal Kumar Sinha, Deepak Kumar, Imran Ali, Ramesh Tiwary, Pankaj Kumar & Amit Kumar, Pp. 28894–28899

### Avifaunal diversity in agroecosystems: a case study from Uttar Pradesh, India

– Fatima Khan & Kaleem Ahmed, Pp. 28900–28910

### First record of the Sistan Sand Boa *Eryx sistansensis* Eskandarzadeh et al., 2020 (Reptilia: Serpentes: Erycidae) from India

– Vivek Sharma & Dharmendra Khandal, Pp. 28911–28918

### Population dynamics and habitat assessment of Indian Flapshell Turtle *Lissemys punctata vittata* (Reptilia: Testudines: Trionychidae) in Chawandiya, Rajasthan, India

– Mahaveer Prasad Vaishnav & Amol Arora, Pp. 28919–28925

### A preliminary checklist of dragonflies and damselflies (Insecta: Odonata) of Kanyakumari District, Tamil Nadu, India

– V. Muthukrishnan, Anand Shibu, Vinod Sadhasivan & R. Amirtha Balan, Pp. 28926–28939

### Documentation of dicotyledonous angiosperm diversity of Kanakamala, Kerala, India

– Marunnoli Umaiba Fitha & Puravannoor Edakkad Sreejith, Pp. 28940–28949

### Diversity of dye-yielding plants traditionally used by ethnic communities of Assam, India

– Bhuvan Chandra Chutia, Hena Parbin, Abhijit Chandra Roy, Krishna Kanta Medhi & Utpal Bora, Pp. 28950–28956

## Review

### Ichthyofaunal diversity and conservation status of Nagaland, India: a comprehensive review

– Rejuba Pongen & Pranay Punj Pankaj, Pp. 28957–28970

## Short Communications

### Preliminary observations on the breeding ecology and potential threats to Bonelli's Eagle *Aquila fasciata* in Sithagiri Malai, Tamil Nadu, India

– S. Naveenkumar, H. Byju & H. Maitreyi, Pp. 28971–28975

### A nesting attempt by Greater Flamingo *Phoenicopterus roseus* in an inland wetland in Kachch District, Gujarat, India

– Gaurav Sirola, Harindra Baraiya, Rajdeep Mitra, Anju Baroth & R. Suresh Kumar, Pp. 28976–28981

### First time in 110 years: sighting of *Gynacantha khasiaca* MacLachlan, 1896 (Odonata: Aeshnidae) in Arunachal Pradesh, India

– R. Mahesh, Rajesh Gopinath, Gaurav Joshi & Roshan Upadhaya, Pp. 28982–28987

## Notes

### Evidence of Rusty-spotted Cat *Prionailurus rubiginosus* (L. Geoffroy Saint-Hilaire, 1831) (Mammalia: Carnivora: Felidae) in National Chambal Sanctuary, Uttar Pradesh, India

– Anshoo Nishad, Hiyashri Sarma, Rajib Saha, Vijay Pratap Singh, Maneesha Bhatt, Atit Rai, Qamar Qureshi & Vishnupriya Kolipakam, Pp. 28988–28990

### First photographic record of Naumann's Thrush *Turdus naumanni* Temminck, 1820 from Assam, India

– Pulakeswar Basumatary, Pp. 28991–28994

### New breeding record of Black-headed Ibis *Threskiornis melanocephalus* from Malappuram District, Kerala, India

– K.K. Junaina & A.P. Rashiba, Pp. 28995–28997

### From the heart of Urad: records of *Cyrtodactylus bapme* Kamei & Mahony, 2021 (Reptilia: Squamata: Gekkonidae) from Assam, India, with comments on the pre-loocal region in males

– Manmath Bharali, Pranjal Swargiary, Tejas Mariswamy, Madhurima Das, Jayaditya Purkayastha & Sanath Chandra Bohra, Pp. 28998–29002
